Introduction

This document “Mapping of the use of European Structural and Investment funds in health in the 2007-2013 and 2014-2020 programming periods” has been developed in the framework of a tender action, on the provision of support for the effective use of European Structural and Investment Funds for health investments, steered by the Directorate General for Health and Food Safety (DG SANTE), managed by the Consumers, Health and Food Executive Agency (CHAFEA), and delivered by EY.

The project outputs developed within the framework of the tender action are as follows:

► WP 1 MAPPING REPORT ON THE USE OF EUROPEAN STRUCTURAL AND INVESTMENT FUNDS IN HEALTH IN THE 2007-2013 AND 2014-2020 PROGRAMMING PERIODS
► WP 2 GUIDE FOR EFFECTIVE INVESTMENTS IN HEALTH UNDER ESI FUNDS
► WP 3 TECHNICAL TOOLKIT FOR EFFECTIVE INVESTMENTS IN HEALTH UNDER ESI FUNDS with the following documents:
  ► WP 3 (1) CATEGORIZATION OF THE 2014-2020 ESI FUNDS INSTRUMENTS AND MECHANISMS
  ► WP 3 (2) REFERENCE CHECKLIST: ESSENTIAL AND SUCCESS FACTORS FOR CALLS FOR PROPOSALS AND FOR THE ASSESSMENT OF PROJECT APPLICATIONS
  ► WP 3 (3) SET OF INDICATORS USEFUL FOR THE FINAL EVALUATION OF ACTIONS
  ► WP 3 (4) COMPENDIUM OF (NEW) CONCEPTS AND MODELS FOR INNOVATIVE, EFFECTIVE AND SUSTAINABLE HEALTH CARE
  ► WP 3 (5) MANUAL ON HOW TO PLAN, IMPLEMENT AND SUSTAIN CAPITAL INVESTMENT IN HEALTH AND HEALTH CARE
  ► WP 3 (6) REFERENCE DOCUMENT ON THE APPRAISAL OF INVESTMENT
  ► WP 3 (7) REFLECTION ON ADDITIONAL ISSUES RAISED BY MEMBER STATES

This report presents the envisaged investments in health-related areas that have been planned for implementation in the 2014-2020 programming period with the support of European Structural and Investment Funds (ESIF). These investments were identified on the basis of publicly available programming documents (above all, Partnership Agreements and adopted Operational Programmes (OPs) – see more in part (ii) Data sources for the mapping).

In addition, the Mapping report contains the inventory of investments in health in all European Union Member States¹ realized with the support of European Structural Funds (SF) in the 2007-2013 programming period.

The aim of this report is to improve the understanding of existing and planned health related investment possibilities in the European Union.

¹ For the 2007-2013 programming period, EU27 Member States are considered; for the 2014-2020 programming period, EU28 Member States (including Croatia) are considered.
The document covers the following:

- Chapter one presents a summary overview of the use of structural funds in 2014-2020 and 2007-2013 programming periods.
- Chapter two contains individual separate country fact sheets with more detailed information about the planned and past health investments.

(i) Scope of analysis

The analysis of investments in health in the EU Member States focuses solely on the European Regional Development Fund (ERDF) and European Social Fund (ESF) health investments identified within the national and regional Operational Programmes (OPs) adopted in the individual Member States. The Cohesion Fund (CF), the European Agricultural Rural Development Fund (EARDF) and the European Maritime and Fisheries Fund (EMFF), which are also part of ESIF, are not considered in the mapping, due to their low relevance for the health sector.

There are other sources and instruments the Member States may use for funding projects in the area of health – among them the European Territorial Cooperation programmes (also within ESIF, for funding covering more than one Member State at once) are worth mentioning. However, these sources have not been considered for this mapping, focusing on national and regional-level funding.

(ii) Data sources for the mapping

The results of the mapping are based on the following data sources:

- Final versions of the 2014-2020 programming documents, i.e. Partnership Agreements\(^2\) and ERDF / ESF OPs for the 2014-2020 programming period adopted by the European Commission.
- Information provided by representatives of national public institutions responsible for health investment and SF / ESIF management (mainly the Ministries of Health and the Managing Authorities of OPs), collected through questionnaires and personal interviews.
- The report “Health and the Structural Funds in 2007 to 2013: country and regional assessment”, available at the European Commission - DG SANTE website.\(^4\)

The mapping has focused on the identification of health priorities and allocations in both programming periods, based on the analysis of the above-listed official documents. Information collected through interviews and questionnaires was used to supplement and refine information reflected in the programming documents.

\(^2\) Individual Partnership Agreements are accessible through the following link http://ec.europa.eu/contracts_grants/agreements/index_en.htm.

\(^3\) Individual country fact sheets are accessible through the following link http://ec.europa.eu/regional_policy/index.cfm/en/information/publications?title=Country%20Fact%20sheet&themeld=0&typeld=0&countryId=0&periodId=0&fundId=0&policyId=0&languageCode=en.

During the collection of data on the 2014-2020 and 2007-2013 health investments, the following identified specifics determined the methodology of data collection and comprehensiveness of the analysis:

► Management of the structural funds in individual EU Member States is organized differently and at different levels of public administration. Some countries have a decentralised system for the management of structural funds, and the data on the use of the funds is therefore dispersed between large numbers of local authorities.

► Data on the use of the structural funds is not comprehensively collected on a sectorial basis in the Member States, but on a basis which follows the set-up of Operational Programmes (i.e. allocation per OP, priority axis, project, beneficiary, region, etc.). OPs exist for both national and regional level. Health is a sector overlapping with many different areas, such as social agenda, education, employment, public administration or research and development, and it is therefore supported by a number of various OPs managed by different authorities. Health care and public health actions have often not been funded as a primary goal, but as a part of integral regional development or through ad hoc actions at the level of individual projects having potential health gains with a primary focus in another area (i.e. social inclusion of marginalized groups of people, which comprises also their access to health care; reducing pollution levels, and therefore improving public health).

► Because of the specifics as mentioned above, information provided in the publicly available programming documents does not permit to identify the exact overall financial allocation earmarked for all ESIF health-related investments. One of the ways to calculate the programmed allocations is to use the amounts given for the so called categories of intervention, included in each OP. However this categorisation of investments is not always sufficiently detailed to unambiguously assess planned health investments. While for the categories ‘health infrastructure’ and ‘e-health,’ one can give a precise overview on planned financial allocations (categories of interventions 053 and 081), for other categories, the precise health content cannot be derived. This is the case of category 107 ‘active and healthy ageing’ and category 112 ‘enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest.’ As the categories are defined, health and social services are not sufficiently separated. In addition, further non-health related categories of intervention, related the areas to promoting social inclusion, combating poverty and discrimination, research and development and innovation or others, may include planned investments in health (e.g. health research) but it cannot be derived from the categories of intervention what their final health-related content may be.

All the above-mentioned specifics limit the ability to comprehensively capture information on the overall amount of the ESIF / SF investments in health in each country.

The methodology and approach to the analysis are detailed in chapter 2 Country Fact Sheets.

---

(iv) Disclaimers

With respect to the above-stated limitations, the overall allocations to health investments in individual Member States cannot be determined unambiguously. While the financial allocations for health infrastructure and e-health are precise, the exact amount of planned health investments in other health-related (i.e. social inclusion) or non-health-specific (i.e. research) categories of intervention cannot be derived.

The whole report and individual country fact sheets nevertheless provide a general overview of planned health investments and funding opportunities in individual Member States as they could be identified at the beginning of the programming period based on information collected from public sources and the programming documents.

It must be noted that the 2014-2020 programming documents might be subject to change over time. Therefore, for any following action, a detailed overview of the most up-to-date version of specific Operational Programmes and other relevant programming documents and/or contact with a relevant Managing Authority is recommended.

Furthermore, this mapping looks at the planned ESIF allocations for health investments at the beginning of the programming period. The actual ESIF spending on health can only be assessed in the future on the basis of an ex-post assessment.

The country fact sheets are an integral part of the whole report and should not be interpreted or used separately.

The information and views set out in this report do not necessarily reflect the official opinion of the Commission. The Commission cannot guarantee the accuracy of the data included in this study. Neither the Commission nor any person acting on the Commission’s behalf may be held responsible for the use which may be made of the information contained therein. Neither EY nor the Commission assume any responsibility for damages resulting from use of the information contained in the report, including by third parties. Any use of the information contained should be accompanied by appropriate reference to this report.
Useful definitions

Community-based care refers to the spectrum of services that enable individuals to live in the community and, in the case of children, to grow up in a family environment as opposed to an institution. It encompasses mainstream services, such as housing, health care, education, employment, culture and leisure, which should be accessible to everyone regardless of the nature of their impairment or the required level of support. It also refers to specialised services, such as personal assistance for persons with disabilities, respite care and others. In addition, the term includes family-based and family-like care for children, including substitute family care and preventive measures for early intervention and family support.

Cross-border health care means health care provided or prescribed in a Member State other than the Member State of affiliation.

Day care comprises health care services delivered to patients who are formally admitted to hospitals, ambulatory premises or self-standing centres, but with the intention of discharging the patient on the same day.

Direct health investments represent investments directly focused on health reforms and health issues (e.g. investments in better access to health care, e-health, deinstitutionalization of health care etc.). In some cases allocations of direct health investments can be identified on the basis of the relevant categories of investments (the so called "categories of intervention").

Indirect health investments represent investments under priority axes not directly related to health and health issues, but where some health related actions can still be supported and / or health entities are considered possible beneficiaries (e.g. the priority axis supporting education and lifelong learning, where among the listed activities, the training of nurses and other medical staff is mentioned).

E-health refers to tools and services using information and communication technologies that can improve prevention, diagnosis, treatment, monitoring and management. It includes information and data sharing between patients and health service providers, hospitals, health professionals and health information networks; electronic health records; telemedicine services; portable patient-monitoring devices, operating room scheduling software, robotized surgery and blue-sky research on the virtual physiological human.

E-prescription means a medicinal prescription, issued and transmitted electronically.

Health care means health services provided by health professionals to patients to assess, maintain or restore their state of health, including the prescription, dispensation and provision of medicinal products and medical devices.

Health care provider means any natural or legal person or any other entity legally providing health care on the territory of a Member State.

Health entity refers to any public or private sector entity whose operations relate to health. This term covers all entities and institutions considered to have any direct or indirect effects on the health system and health care provision. The term covers the Ministry of Health, health care providers, SMEs and R&D institutions in various health relevant areas such as pharmaceutical research, biomedicine, biotechnology, nanotechnology, technology innovation etc., institutions aiming at provision of care to the elderly in communities, medical educational institutions etc.

---

For further information on sources, see the final section of Sources – Definitions, at the end of the GUIDE FOR EFFECTIVE INVESTMENTS IN HEALTH UNDER ESI FUNDS at: http://esifforhealth.eu/Guide.htm.
**Health gain** is a way to express improved health outcomes. It can be used to reflect the relative advantage of one form of health intervention over another in producing the greatest health gain.

**Health inequalities** mean differences in health status between individuals or groups, as measured by for example life expectancy, mortality or disease. Specifically, health inequalities refer to those avoidable and unfair differences in health that are strongly influenced by the actions of governments, stakeholders, and communities and can be addressed by public policy.

**Health professional** means a doctor of medicine, a nurse responsible for general care, a dental practitioner, a midwife or a pharmacist or other professional exercising activities in the health care sector, which are restricted to a regulated profession as defined in Article 3 (1) (a) of Directive 2005/36/EC.

**Health systems** are the processes and infrastructures (legal, physical, financial and human resources) to deliver health care, prevent disease and improve health status. Health systems include not only health care but also public health measures.

**Health technology** means a medicinal product, a medical device or medical and surgical procedures as well as measures for disease prevention, diagnosis or treatment used in health care.

**Inpatient** is a patient who is formally admitted to a facility and stays overnight.

**Institutional care** is residential care where:

- Residents are isolated from the broader community and/or compelled to live together
- Residents do not have sufficient control over their lives and over decisions which affect them
- Requirements of the organisation itself tend to take precedence over the residents’ individualised needs

**mHealth** (mobile health) covers medical and public health practice supported by mobile devices, such as mobile phones, patient monitoring devices, personal digital assistants (PDAs), and other wireless devices.

**Outpatient** is a patient who is not formally admitted to a facility (physician’s private office, hospital outpatient centre or ambulatory-care centre) and does not stay overnight.

**Patient** means any natural person who seeks to receive or receives health care in a Member State.

**Patient safety** means freedom, for a patient, from unnecessary harm or potential harm (medical or other) associated with health care.

**Prevention** is an integral part of the process of transition from institutional to community-based care.

- Disease prevention in general represents activities designed to protect patients or other members of the public from actual or potential health threats and their harmful consequences.
- In the case of children, it includes a wide range of approaches that support family life and prevent the need for the child to be placed in alternative care.
- In the case of adults, prevention refers to a wide range of support services for individuals and their families, with the aim of preventing the need for institutionalisation.
- In relation to older people, the focus should be on preventing ill health, the loss of function, and the restoration of independence.
- Disease prevention
**Public health** shall mean all elements related to health, namely health status, including morbidity and disability, the determinants having an effect on that health status, health care needs, resources allocated to health care, the provision of, and universal access to, health care as well as health care expenditure and financing, and the causes of mortality.

**Strategic policy framework** means a document or a set of documents established at national or regional level, which sets out a limited number of coherent priorities established on the basis of evidence and a timeframe for the implementation of those priorities and which may include a monitoring mechanism.

**Sustainability** means avoiding an excessive increase in government liabilities – a burden on future generations – while ensuring that the government is able to deliver the necessary health services and to adjust policy in response to new challenges.
1 Overview of the mapping results

1.1 Programming period 2007 - 2013

Funding of health care and public health from the European Structural Funds (SF) was one of the eligible areas for the 2007-2013 programming period. Health infrastructure allocation for this period totalled almost 5.2 billion EUR and represented about 1.5% of the total SF allocation.

(i) Approaches to the use of SF for investment in health

The situation of individual health systems in the different Member States determined the approach used by the respective Member States toward health funding from SF. The main approaches are outlined in the following scheme.

Scheme 1: Approaches to health funding from SF identified in the 2007-2013 programming period

In the first approach, Structural Funds are not considered a major source of funding for health, and therefore the national resources are mostly used. Health-related projects receive funding from SF only as part of larger and more general projects.

In the second and third approach, Structural Funds are used as an important source of health funding. The difference is that the second approach uses the funds for reforms of a wider scope and the third approach uses the funds for more focused projects. An example of a reform under the second approach can be a comprehensive

---

7 Based on the Commission report “Health and Structural Funds in 2007-2013: Country and regional assessment”
health care reform aimed at minimizing regional disparities. The psychiatric care reform in Greece is a good example of the types of projects for which SFs are used under the third approach.

In the fourth approach, Structural Funds were used directly by the health sector on infrastructure modernization. These funds were used mainly in countries that would have lacked resources for financing such projects if SFs had not been available.

(ii) Areas of investment in health

Health infrastructure modernization represented most of the health investments in the 2007-2013 programming period. Other areas of health investments included health promotion and disease prevention, education of medical staff, e-health, medical research and development (R&D), increasing effectiveness and quality of public administration and health services, workplace health and safety, and health tourism. More details about these investment areas are provided below.

Health infrastructure modernization and improved access to health care

The most significant area of investment was modernisation of the health care infrastructure and improvement of the quality and access to health services. These investments include renovation and development of new infrastructure including hospitals, medical equipment and emergency services. A significant part of this investment area was funded via projects aimed at reducing regional disparities. Countries where these investments were prevalent are those that entered the EU after 2004 such as Latvia, Poland and Lithuania. This highlights their effort to bring the quality of health care services to the European standard.

Health promotion and disease prevention

These activities were aimed at raising awareness of the importance of a healthy lifestyle. For example, in Estonia one of the goals was addressing bad lifestyle choices associated with low physical activity, unhealthy nutrition, or the consumption of addictive substances (e.g. tobacco, alcohol, drugs). Other countries addressed similar goals and intended to promote a healthy lifestyle through workshops and public education. Programmes aimed at early diagnosis of diseases in order to prevent their spreading and negative effect were also included in this area of investment. Examples of countries that invested in these areas are Bulgaria, Estonia, Greece, Hungary, Italy, Lithuania and Romania.

Education of medical staff

The aim of this investment area was to provide a sufficient number of well-trained medical professionals to meet the growing demands of the ageing population. Activities launched under this area were, for example, promoting the medical profession among students and providing additional training for medical professionals. For example, Poland introduced investments into educational programmes in order to train physicians in areas of general need such as oncology, cardiology or occupational medicine. Increasing the effectiveness of the administrative side of health care was also an aim under this investment area. In the UK, training was provided for public service managers in order to develop skills needed to lead and manage renegotiation programmes. Other countries investing in these areas include, for example, Greece, Italy, Latvia, Poland, and Slovakia.

E-health

Investments under this area were aimed at developing and increasing digital health care. This includes building ICT infrastructure and providing internet access to public administration bodies, securing and
protecting personal medical data as well as introducing e-health services such as home treatment, smart electronic cards, e-learning, e-procurement, telemedicine, etc. These investments were prevalent in countries which entered the EU after 2004 such as Hungary, Estonia and Czech Republic.

► Medical R&D
Activities aimed at enhancing successful interaction between research, business, the public sector and political institutions as well as financial support in the form of grants and loans to businesses involved in the development and innovation in pharmaceuticals, biotechnology and medical technology. Countries investing in these areas were, for example, Belgium, Sweden and the Netherlands.

► Increasing the effectiveness and quality of public administration and health services
Investments under this area focused on improving the efficiency and effectiveness of public service delivery. Investments were aimed at the development of shared services and electronic access to services by individuals and businesses, development of certification and accreditation systems in health care entities, and training of managerial staff and public resources administrators in the health sector. Examples of countries that invested in these areas are Portugal, Poland, Romania and the UK.

► Workplace health and safety
The aim of this investment area was to increase health and safety in the workplace. Efforts to reduce absence due to illness could potentially contribute both to increasing the effective supply of labour and the quality of work of seniors and other groups. Campaigns promoting regular medical check-ups, a healthy environment, as well as the ones informing about the risks of smoking and drinking alcohol, were used as tools for educating the workforce. Other methods were also implemented. For example, Latvia was performing studies and surveys analysing the relationship between health status at work, the health status of inhabitants of working age, and the health services and the employment situation in order to develop more effective guidelines and programmes for improving the health of workers. Examples of countries investing in these areas are Czech Republic, Denmark, Ireland, Latvia, Luxembourg, Poland and Romania.

► Health tourism
Investments under this area included the development and improvement of health tourism centres and facilities, as well as increasing the variety and quality of products and services offered. The most common areas of health tourism are wellness, spa, and also mountain resorts aimed at people suffering from asthma or allergies. Countries investing in these areas include Austria, Cyprus and Greece.
Financial allocations for health investments

As mentioned before, the total coded health allocation for all Member States in the 2007-2013 programming period was about 5.2 billion EUR. This number is only a conservative estimate though, because it is based solely on direct health sector investments in health infrastructure. The total value of health investments would be much larger if other health investments were also taken into account.

The largest allocation of Structural Funds toward health in absolute value was 1.3 billion EUR in Hungary. This amount represented 5.5% of its total SF allocation. Other large 2007-2013 SF health investors include Poland, Greece, Czech Republic, Portugal, Spain, Slovakia, Latvia, Lithuania, Estonia and Italy. The following charts show the financial allocation of SF for health (infrastructure) investments and its proportion compared to the total country allocation. In general, the largest SF health investors were the countries which entered the EU after 2004.

**Chart 1: Total Structural Funds allocated to health (infrastructure) in the 2007-2013 programming period**

**Chart 2: Allocation of SF for health (infrastructure) as a percentage of total allocation in the 2007-2013 programming period**

---

8 In the report “Health and Structural Funds in 2007-2013: Country and regional assessment” (http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm), it is stated that the total health allocation for this period is based purely on direct investments into health infrastructure.

9 The numbers represent financial allocation for health in individual Member States in absolute figures.

10 The numbers represent the share of Structural Fund allocation for health in individual Member States as a percentage of total Structural Fund allocation to these countries.
In some Member States, the Structural Funds represented an important source of funding for the health sector, and even a more important one if we are to consider capital investments alone. The chart below shows the proportion of Structural Funds as part of the total health funding (all types of expenditure combined e.g. workforce) of the respective EU Member States. It can be observed that the proportion is highest in Latvia, where 2.5% of the total funds allocated to health by the country were provided by the Structural Funds. In Hungary, Estonia, Lithuania, and Malta, Structural Funds represented 1.2%-2.4%. In the remaining countries, this proportion did not exceed 1%.

Chart 3: Allocation for health (infrastructure) from SF in 2007-2013 in relation to total health expenditure, top 10 Member States

Operational Programmes supporting health investments

Health investments were financed mainly from OPs with a focus on regional infrastructure development (infrastructure ERDF projects), and on human resources development and employment (“soft” ESF investments).

The only OP devoted entirely to health existed only in Slovakia, with the Ministry of Health acting as the Managing Authority. In several other countries with significant health investments (e.g. Czech Republic, Latvia, Poland), Ministries of Health acted as the Intermediate Bodies of relevant OPs. In some Member States (e.g. Estonia, Hungary), OPs had health investments earmarked at the level of priority axes. In other countries (e.g. Belgium, Ireland, Sweden), health was either one of the areas of intervention or it was only recognized as one of the sectors at the individual project level.

---

11 The table comes from total health allocations available at Eurostat and Structural Fund total allocation to health retrieved from country assessment available at the EC – DG SANTE website. Given the incompleteness of the data, the Structural Fund average per year is divided by the average of national health allocation retrieved from the accessible data from Eurostat.
1.2 Programming period 2014-2020

Investment in health remains one of the eligible areas for the use of the European Structural and Investment Funds in the period 2014-2020. Analysis of the OPs across the EU Member States indicates possible areas of support in the 2014-2020 programming period. Priority areas of investment in health recognized by the Cohesion Policy 2014-2020 are designed to respond to the main current challenge in European health systems, which is the need to increase their cost-effectiveness, accessibility and sustainability. In general, the health priorities identified by Member States, in their programming documents, reflect efforts to tackle this challenge.

As regards financial allocations for health related investments across the EU Member States in the 2014-2020 programming period, they are spread among different types of planned expenditures. Therefore, and as mentioned in the ‘limitations’ section, on the basis of the programming documents it is not always possible to identify the total allocation planned for all health-related ESIF investments. It can be however stated that over 4.94 billion EUR has been foreseen for exclusive health investments from the European Regional Development Fund (ERDF) and further 4.24 billion EUR for investments from the European Social Fund (ESF), where the latter include also social investments and active ageing investments.

(i) Approaches to the use of ESIF for investment in health

Differences between approaches toward the use of ESIF for health investments among Member States can still be identified. Yet, introduction of new prerequisites (the so called ex-ante conditionalities) for receiving the ESIF support in the 2014-2020 programming period has forced many countries to revise their approaches towards use of ESIF, with two basic approaches outlined (EU MS before 2004 and EU MS acceding in/after 2004). Somewhere in between these two approaches is a group of strongly decentralized countries consisting of many independent regions with various levels of development and health objectives supported from ESIF (e.g. France, Spain, Italy). Therefore, the scheme of approaches to the use of ESIF for health funding presented for the period 2007-2013 has been revised as follows.

---

12 More information about specific areas of investment in health recognized by the Cohesion Policy 2014-2020 are reflected in greater detail by the GUIDE FOR EFFECTIVE INVESTMENTS IN HEALTH UNDER ESI FUNDS (Part I).

13 Specific context and challenges European health systems are facing are reflected in greater detail by Work Package 3 (4) COMPENDIUM OF (NEW) CONCEPTS AND MODELS FOR INNOVATIVE, EFFECTIVE AND SUSTAINABLE HEALTH CARE and by Work Package 2 GUIDE FOR EFFECTIVE INVESTMENTS IN HEALTH UNDER ESI FUNDS (chapter 2). Health funding in the 2014-2020 programming period.

14 Calculations done on the basis of the categories of intervention 053, 081, 107, 112. For more details, see chapter 2 and methodology description.

15 Classification of regions is based on Regulation 1303/2013, laying down general provisions on the Structural Funds. The following three categories of NUTS level 2 regions are eligible from the Investment for growth and jobs goal set up by this Regulation:

(a) less developed regions, whose GDP per capita is less than 75% of the average GDP of the EU-27;
(b) transition regions, whose GDP per capita is between 75% and 90% of the average GDP of the EU-27;
(c) more developed regions, whose GDP per capita is above 90% of the average GDP of the EU-27.
In relation to the 2007-2013 programming period, ESIF ceased to be a source of investments mostly focused on infrastructure. Infrastructure in itself does not have a value added in terms of cost-effectiveness and health system efficiency unless it is included within a larger health investment strategy. In the 2014-2020 programming period, health infrastructure investments and other investments in health in individual Member States are supported mostly as an integral part of their health system reforms in order to ensure that the system is effective and efficient. For this purpose, Member States using ESIF as a source of funding for their health systems had to present a strategic framework for health investments; every investment has to be in line with this framework.

(ii) Areas of investment in health

The overarching challenge is the same for the whole European Union; however, the health system of each Member State faces its own unique challenges. The types of investments, therefore, differ between the individual countries. Despite the relative differences, it is possible to identify major areas of health investment common to all EU Member States. These areas are: (i) deinstitutionalization and development of community-based care, (ii) promotion of active and healthy ageing, (iii) improving access to and quality of health care services, (iv) health

---

16 Based on the analysis of approved operational programmes for the 2014-2020 programming period.

promotion and disease prevention, (v) continued education of medical staff and (vi) increased efforts in the field of e-health. More information and examples of specific investments under these areas are described below:

► **Deinstitutionalization and development of community-based care**

The main idea behind community-based care is reinforcement of services at community level and first-contact services (i.e. primary care) so that they can deal with important societal needs at the closest level i.e. local level. Development of resources including community-level forms of social and health care services is therefore vital. These types of services can be typically utilized by people with long-term illness who prefer to stay at home or by people who live in remote areas far away from healthcare facilities; patients therefore receive medical visits or use out-patient services as needed. Other activities within this area include development of foster care and other preventive and alternative forms of care and services which can be used by elderly people with disabilities, or people with mental health problems, therefore avoiding or limiting the use of (in-patient) services within a larger institution (“deinstitutionalization”). Training and support to parents and caregivers, and building and adapting facilities – such as day care centres or family houses – is also included in this area of investment. This area of investment is most prevalent within regions categorized by the European Investment and Structural Funds (ESIF) as ‘less developed’ and is mainly associated with countries which entered the EU after 2004. A specific example of community-based spending in Croatia is providing support for the specialization of family medicine, radiology and emergency medicine in Community Health Centres as a response to a lack of qualified persons able to provide primary health care. Another example are projects within the process of psychiatric care deinstitutionalization that are about to be funded in the Czech Republic.

► **Active and healthy ageing**

Activities supported under this investment area are designed to help the elderly people to lead a healthy lifestyle. One way to do this is to prevent social exclusion and provide a means of meaningful participation in the society. Many countries are therefore investing in various programmes designed to provide continued employment for senior citizens. Sometimes these programmes are in the form of educational and training programmes for the elderly so that they can adjust to the changes in the workplace and can re-enter the work force (e.g. Austria, France). Sometimes they are in the form of financial aid or advisory services to the companies and the public sector (e.g. Austria, Netherlands). Besides helping the elderly citizens to re-enter the labour force, many countries are also investing in alternative programmes providing cultural, educational, and recreation activities aimed at older people (e.g. Portugal). These types of investments are also prevalent in the ‘less developed’ regions, for example in Latvia, Lithuania, and Slovenia. Some countries also plan to implement community-based services, including community health services (e.g. Malta, Czech Republic), intended to be focused, among others, on elderly people with, for example, the aim to support inclusion of the target group in community life.

► **Improving access to and quality of health care services**

Investments under this area include projects aimed at improving access to health care services (including primary health care services) to the general population but with a particular focus on the vulnerable groups, such as the disabled people or families with children. Infrastructure modernization, reconstruction, or procurement of new buildings, medical equipment or other equipment necessary for efficient operation of health services (such as ambulances and other vehicles) is part of the effort. Improving the accessibility of health care centres by building wheelchair ramps or measures aimed at the conditioning of buildings (i.e. increasing energy efficiency as in Slovakia) are also included under this investment area. Funds for these types of investments are mainly allocated in the ‘less developed’ regions in countries which entered the EU after 2004. In addition to the projects mentioned above, accessibility of
health care is intended to be improved by improving hospital and health related administration and by improving skills and knowledge of doctors and personnel directly involved in health care (e.g. Poland). This is connected to creation of standardized procedures in cases of most common and most serious diseases (e.g. Slovakia). As a supportive measure in some countries (e.g. Malta and Latvia) enhanced health related data collection and processing is planned, for example in relation to data concerning health insurance (e.g. Croatia).

► **Health promotion and disease prevention**

Health promotion is aimed at increasing health awareness among citizens (whole population programmes but also programmes targeted mainly at children and various other groups, such as people with substance abuse problems or marginalized communities) so that they can make informed decisions about their lifestyle choices. Early detection of health problems is a major measure being undertaken as part of disease prevention. For example, in Romania this includes early detection, screening, diagnosis and treatment of major diseases (e.g. heart disease, cancer, diabetes, COPD, chronic kidney disease, chronic hepatitis, tuberculosis, HIV-AIDS). In Estonia, there are programmes for early detection of alcohol and substance abuse, addiction treatment and counselling. These investments are prevalent in the ‘less developed’ regions, often of countries which entered the EU after 2004.

► **Education of medical staff**

One of the aims under this investment area is to increase the efficiency of health care through education and training of medical staff. For example, in Poland there are programmes aimed at technical training of the medical staff so they can efficiently operate medical assets which are becoming increasingly used by the industry as part of health care modernization. Poland is also investing in the training of administrative staff and in the management of therapeutic entities to increase their planning and implementation capacities. Strengthening the qualifications of nurses to better meet the challenges of an ageing population is also supported. Another aim of this investment area is to promote employment in health professions. This is done both via educational support (e.g. scholarships) and via training (e.g. internships, work placements). Examples of countries implementing such programmes are Croatia, Hungary, and Malta. In some countries (e.g. Germany, Denmark), investment into lifelong learning is usually of a broader scope and does not only include health professionals, but also professionals from other sectors of the economy.

► **E-health**

This area of investment encompasses all investments related to the use or procurement of ICT technology. There are two main types of investments within this area. The first one is investment into centralized and integrated information systems. For example, in Croatia an integrated information system for the Croatian Health Insurance Company is being developed to include services such as e-directives, e-drug prescription as well as an online payment system. The other type of investment is into telemedicine and m-health technologies which allow for the provision of clinical health care services at a distance. These technologies are improving access to medical services to all citizens and in particular people living in remote areas or rural communities limited to basic health care services. Investment into telemedicine can also be focused on a specific area within the health sector. For example in Bulgaria, ICT investments including telemedicine are focused on the emergency health services. Besides the two types of investments just mentioned, there are also investments in the training of staff in the use of ICT technology or the procurement of ICT technology for hospitals. This area of investment is prevalent across all three categories of regions, the ‘more developed’ (e.g. from Ireland, Sweden, Germany, France, Cyprus), the ‘transition’ (e.g. from Greece, Malta, Spain), and the ‘less developed’ (e.g. from Bulgaria, Latvia, Lithuania, Slovakia).
Besides the above-mentioned areas of investment, other areas which are further in the text referenced as ‘indirect investments’ have been also identified. These indirect investments represent investments under priority axes not exclusively related to health and health issues, but where some health related actions can still be supported and/or health entities are considered possible beneficiaries. For example, within priority axes supporting research and development, the EU Member States are often reflecting innovation with a focus on multiple areas such as sustainable energy, agriculture, technology, health, etc. These projects are not exclusively aimed at health care; however, health institutions can become beneficiaries if they meet the eligibility criteria set in the respective OPs. It is not possible to identify a precise amount of funds received as indirect investments and therefore it is not used in the calculation of the total health allocation of the Member States.

The major indirect or non-exclusive health investments under priority axes / specific objectives in Operational Programmes of the Member States identified in the 2014-2020 programming period are the following:

► Support of employment as a means of preventing social exclusion

Activities under this area of investment are designed to help disadvantaged and vulnerable groups (e.g. people with disabilities, those suffering from mental health problems or substance abuse) to find employment as a way of preventing social exclusion by helping them to develop work habits (connected to regular personal hygiene) and by simplifying access to better health care through health insurance. Types of investments under this area include incentives provided to businesses to encourage employment of the target groups, programmes designed to help the target groups to find work on their own (e.g. Denmark), policy changes such as guaranteed minimum pay to people in the target groups (e.g. Luxembourg) or an early retirement option for those unable to get back to work (e.g. Denmark).

► Medical Research and Development (R&D)

These investments are aimed at supporting research, development and innovation activities focused on the development of new and the improvement of existing solutions and treatments for medical conditions. Major areas of focus are biotechnology and nanomedicine. As part of this investment area, partnership is often encouraged between the government and universities (e.g. Malta, Romania, Croatia) or SMEs (e.g. Belgium, Bulgaria, Greece, Netherlands, Spain), where the partners undertaking R&D activities are funded via the government. Funds for these types of investments, even though not exclusively, are primarily being used by the ‘more developed’ regions.

► Increasing the effectiveness and quality of public administration and health services

The investments aimed at increasing the quality of public administration in general and health care services in particular are quite diverse. Examples include increasing effectiveness and capacity in the public administration through improving service delivery and human resources management (e.g. Croatia), strengthening the National Strategy for Health Protection (e.g. Greece), innovation in the management of health services and providing support for the development of functional skills for the implementation of the innovative processes (e.g. Italy), training of the administrative staff and managers of therapeutic entities to improve efficiency of the health care (e.g. Poland), or reducing administrative burden by simplifying legislation in areas including health (e.g. Romania).

► Health tourism

Investments under this area include the promotion of health tourism (i.e. referring to the use of medical care in countries where one has no residency often overlapping with a leisure stay) and the development and improvement of health centres and facilities for such purpose, as well as increasing the variety and quality of products and services offered. There is an attempt to prolong the active season as well. Countries investing in these areas are Greece and Hungary.
Workplace health and safety

Investments in this area include those into occupational health and safety. Programmes include the development of safety procedures and tools, training programmes and preventive measures (e.g. Germany, Slovenia, UK).

Prevention of social exclusion among the Roma communities including health promotion and disease prevention

A major target group for social inclusion actions are segregated communities such as the Roma. These communities are often lacking basic education and are living in bad conditions with low hygiene standards and many health problems. Countries such as Slovakia or Bulgaria are investing in health education programmes focused on personal hygiene, family planning and responsible parenthood, prevention of contagious diseases, safe manipulation of food, prevention of injuries and accidents, etc. In other countries (e.g. Czech Republic, Bulgaria, Romania), support to the Roma minority is part of an overall support to disadvantaged groups (including disabled people or older workers).

Risk prevention and disaster preparedness

As part of disaster preparedness programmes, emergency departments may receive funding. In the Czech Republic, emergency health services are listed as potential beneficiaries of such investment.

Financial allocations for health investments

As stated, it is not possible to identify the exact total allocation of ESIF towards health investments on the basis of available sources (the programming documents). Such calculation can be done only for part of the ERDF investments, where over 4.94 billion EUR has been foreseen for Health Infrastructure (053) and Strengthening ICT Applications including e-health (category 081). As regards the ESF, due to the regulatory framework, the expenditures for health investments have been programmed jointly with social investments or with active ageing investments. Therefore the total ESF amount of over 4.24 billion EUR (cat. 107 and 112), which contain interventions aiming at healthy ageing and enhancing access to affordable, sustainable and high-quality health care, consist also of other types of investments, such as for social services of general interest, the extent of which is not possible to determine at this stage.

Investments under the category 053 are usually made into public infrastructure such as healthcare or community care centres, which are aimed at providing social services including health care services to vulnerable groups. While still aimed at increasing social inclusion, the investments under the category 112, are rather spent on ‘soft’ investments i.e. social or training programmes. Based on the currently approved ESIF budgets, Poland will receive 2.95 billion EUR usable for interventions with a health component, making it the greatest receiver of the ESIF for health. Other large beneficiaries of ESIF health funding include Romania, Portugal, Czech Republic, Slovakia, Hungary, Croatia, Greece, Lithuania, Latvia and Italy.

The following charts show the ESIF amounts allocated, per country, within the categories of intervention which are exclusively health-related or that contain a health component.  

---

18 Funds allocated to the categories of intervention 053, 081, 107, 112. For more details, see chapter 2 and methodology description.
Chart 4: ESIF allocated for health infrastructure (cat. 053) in 2014-2020

Chart 5: ESIF allocated for e-health (cat. 81) in 2014-2020

Chart 6: ESIF allocated for active and healthy ageing (cat. 107) in 2014-2020

Chart 7: ESIF allocated for access to health and social services (cat. 112) in 2014-2020

Source: Analysis of approved Operational Programmes for the 2014-2020 programming period.
Operational Programmes supporting health investments

One of the principles of the 2014-2020 programming period is the greater focus and concentration of the funds. Compared to the previous programming period, this requirement is reflected in generally less but more objective-targeted operational programmes (OPs). Due to the possibility of multi-fund OPs, there is just one operational programme in some of the Member States (e.g. Baltic countries).

Health investments will be financed mainly within the operational programmes with a focus on country / regional competitiveness (“hard” investments from ERDF) and on human resources development (“soft” investments from ESF). There is no programme solely devoted to health in any one of the Member States.

In some countries, the Ministries of Health are expected to be involved in the ESIF management structure as the Intermediate Bodies (quite a common set-up in the Central and Eastern European countries, e.g. Latvia, Lithuania, Poland, Slovakia, Hungary), but more often the Ministry of Health is not expected to have any formal role, beyond perhaps providing ad-hoc advice, in the ESIF management and implementation structure (common in larger countries with many provincial / regional Managing Authorities e.g. France, Germany, Italy or Spain).

Comparison of the 2007-2013 and 2014-2020 programming periods

Categorization of regions has changed between the two programming periods. In the 2007-2013 programming period, there were four categories of regions: Convergence Regions, Phasing-out Regions, Phasing-in Regions, and Competitiveness and Employment Regions. In the current period, there are only three categories of regions, the Less Developed Regions, the Transition Regions, and the More Developed Regions. Regions in the countries which entered the EU after 2004 are mostly categorized as Less Developed (equivalent to Convergence Regions) and the regions in the countries of Western Europe—such as Germany, Belgium, Netherlands, Denmark, Austria, or France—are mostly categorized as More Developed (equivalent to Competitiveness and Employment Regions). Some regions changed their categorization between the two periods which can be explained either by economic development or because of the actual change in the categorization of regions from four to three. Besides the change in the categorization of regions, it is important to mention that as part of the 2013 EU enlargement, Croatia became a new EU Member State.

In general, the approach towards the use of ESIF for funding of health investments has not changed much between the previous and the current programming period. In the ‘more developed’ and ‘transitional’ regions, it is common that ESIF represents only a minor source of health investments and mainly supports individual projects which are not coordinated at the national level. In the ‘less developed’ regions, ESIF still represents an important source of funding for reforms aimed at increasing the cost-effectiveness and sustainability of health systems.

Contrary to the 2007-2013 programming period, ESIF ceased to be a source of investments exclusively or mostly in infrastructure priorities. This is because infrastructure priorities that are not part of an overall health strategy do not significantly increase the cost-effectiveness and efficiency of health systems. Infrastructure investments in the Member States are therefore mainly supported as an integral part of the health system reforms.

---

19 Conclusions are derived from the mapping in the EU Member States, analysis of the Member States’ Partnership Agreements and Operational Programmes.

Other areas of support are now deinstitutionalization and the development of community-based care, promotion of active and healthy ageing, improving access to and quality of health care services, health promotion and disease prevention, continued education of medical staff and increased efforts in the field of e-health.

In comparison with the 2007-2013 programming period, the differences between areas of health supported by the individual Member States through ESIF are slightly decreasing. This is signified by the fact that active and healthy ageing as well as the support of e-health are priorities for both the more developed and the less developed regions. Community-based care and health promotion and disease prevention are mainly important under ESIF in the less developed regions. However, just like active and healthy ageing, they have grown in importance which is in accordance with the strategy of empowering the patient (and citizen) as a key to sustainable health systems.  

The roles of the health ministries of different countries remained mostly unchanged between the two periods. In approximately half of the countries, the Ministries of Health played no formal role in the implementation of ESIF and, in the other half of the countries, the Ministries of Health acted as the Intermediate Bodies for some operational programmes. The Ministries of Health were often a beneficiary of the ESIF. The roles of the health ministry only changed for a few countries. For example, in Hungary in the 2007-2013 programming period, the National Institute for Quality and Organisational Development in Health Care and Medicines (GYEMSZI) was responsible for implementing health projects under some OPs; however, in the 2014-2020 programming period, the Ministry of Human Capacities (which is responsible for the health agenda in the country) became the Managing Authority as well as an Intermediate Body for the Human Resources Development OP 2014-2020.

Finally, although there have been some changes in the country allocations in each Member State, utilization of ESIF for health investments (all categories of investment 053, 081, 107 and 112) overall seems to be increasing (see Chart 12). In most of the countries, the allocation for health priorities as well as its share of the total country allocation increased in the 2014-2020 programming period.

The following charts compare the data about the planned health investments related to health infrastructure (cat. 053) in the 2014-2020 programming period and the realized health infrastructure investments in the 2007-2013 programming period expressed in absolute as well as relative terms. Comparison shows that the investments in health infrastructure in absolute terms in 2014–2020 decreased compared to 2007-2013 period (except for Poland, Romania, Slovakia and France.

22 The numbers represent financial allocations to health in individual Member States in absolute figures.

23 The numbers represent the share of ESIF allocation to potential health related interventions in individual Member States as a percentage of total ESIF allocation to these countries.

2  Country fact sheets

This part of the report presents outline information about health investments planned for the 2014-2020 programming period as well as investments performed during the 2007-2013 programming period in individual Member States.

(i) Structure of the country factsheets

Within the country factsheets, data about the 2014-2020 programming period is introduced first, followed by an overview of the 2007-2013 programming period.

The structure of the information presented on individual country fact sheets is as follows:

► General country statistics (GDP, health sector spending as a % of GDP, healthy life expectancy)
► Operational Programme scheme, i.e. number of OPs that include health vs. total number of OPs adopted for 2014-2020 programming period. [specific health relevant OPs are listed within ‘Source of funding of health investments’]
► Role of the Ministry of Health in SF / ESIF implementation
► Financial allocation which includes health (planned allocation for health priorities)
► Scope of investments (areas of health investments and specific activities supported)
► Source of funding of health investments (identification of health relevant Operational Programmes)

Specifically for the 2014-2020 programming period, the country fact sheet also provides more detailed information about the scheme of relevant OPs and allocations for health issues at the level of individual priority axes.

(ii) Methodology of data collection

► 2007-2013 programming period

Information about the 2007-2013 OP scheme, health allocations and scope of health investments are based on information collected by the Commission report “Health and structural funds in 2007 to 2013: country and regional assessments”. In some cases, information about the scope of investments was adjusted on the basis of interviews conducted with representatives of the Ministries of Health or other relevant institutions in the Member States. This is mainly the case for countries with no planned health priorities where some individual projects in health were traced.

► 2014-2020 programming period

Information about the 2014-2020 programming period was collected on the basis of a detailed analysis of the final versions of the programming documents, i.e. the Partnership Agreement and individual operational programmes.

Sources of information (respectively): Eurostat, The Economist; Health in Europe: Information and Data Interface. All indicators apply for 2012, the most current data available.

Developed based on information collected in “Health and the Structural Funds in 2007 to 2013: country and regional assessment”(for the 2007-2013 programming period) and analysis of the 2014-2020 operational programmes and description of specific activities under relevant specific objectives (for the 2014-2020 programming period).

developed in individual Member States for the 2014-2020 programming period, coordinated with and adopted by the European Commission. The Mapping report covers 309 national and regional operational programmes.

In order to identify the planned allocation of ESIF sources for health priorities, the following categories of interventions were considered as relevant:

- **053 Health Infrastructure**
  
  *Within category 053, infrastructural (and equipment) investments in health care facilities are to be supported. These investments are usually realized as an integral part of health system reforms.*

- **081 ICT solutions addressing the healthy active ageing challenge and e-health services and applications (including e-care and ambient assisted living)**
  
  *Within category 081, various ICT investments within health system and concepts aiming at active and healthy ageing are to be supported.*

- **107 Active and healthy ageing**
  
  *Within category 107, various activities designed to help elderly people to remain active and healthy and prevent social exclusion of elderly people are to be supported.*

- **112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest.**
  
  *Within category 112, various concepts and projects aiming at improving access to and quality of health care services (e.g. deinstitutionalisation of care, development of community-based care, improvement of care accessibility, procurement of modern medical solutions, concepts supporting social inclusion etc.) are to be supported.*

Categories 107 and 112 may in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories were taken into account in the calculations of the planned health-related allocation, as they all include, at least to some extent, health investments. Even though their total sum cannot be called "health allocation", the global amount shows the volume of investments which contain health-related investments.

In some countries, specific types of investments (also introduced earlier as indirect investments—see chapter 1.2) could be identified. These investments represent investments under priority axes not directly related to health issues, but where some health related actions can still be supported and / or health entities are considered possible beneficiaries. Only indirect investments with at least some linkage to health were included in the country fact sheets. Examples of indirect health investments identified during the analysis of operational programmes and reflected in the country fact sheets are as follows:

- Modernization of public administration and strengthening the institutional management capacities, e.g. improving strategic and analytical capacities in the Ministry of Health (among other public institutions), and optimisation of health sector policies

- Support for R&D in various areas, e.g. pharmaceutical research, biomedicine, biotechnology, nanotechnology, technology innovation, etc.

---

Support for SMEs doing business in various health-relevant areas, e.g. R&D and construction of medical devices, software for e-health solutions / digital health care development, health or medical tourism etc.

- Strengthening of lifelong learning and education of the workforce, e.g. strengthening the qualifications of staff to better meet the challenges of the ageing population, promoting employment in health professions etc.

- Supporting employment as a means of preventing social exclusion for disadvantaged groups such as people with mental health problems, disabled people, etc.

- Activities aimed at a healthy workforce and safe working conditions

Most of the above are indirect investments covering predominantly non-health interventions where the planned health allocation cannot be unambiguously and a priori assessed. Therefore this 'health' allocation is marked as 'n/a' in the country factsheets. These investments do not enter in the total health allocation figures calculated as described above.

(iii) Data captured

- Scope of analysis

For the scope of analysis and data sources please see the Introduction part.

- Level of detail of the country fact sheets

In countries with a large number of regional operational programmes (specifically in France, Italy, Spain, Germany, Poland, and Greece), information from the individual regional operational programmes has been aggregated. Individual regional operational programmes were analysed to capture the total amount of planned health investments in the country at regional level; however, specific health activities and investments addressed in individual regional operational programmes were not listed in the country fact sheet. Only in countries with no national operational programmes (i.e. Belgium and UK), regional operational programmes were analysed in greater detail.

(iv) Summary statistics

- Financial allocations in all EU Member States

Detailed and summarized statistics on health allocation from ESIF among the EU Member States in the 2014-2020 programming period is depicted in Table 1. Amount of health investments is summarized and sorted by categories of intervention which contain health (053, 081, 107, and 112) for each EU Member State, as well as for the whole EU28. Information on total allocation within the ERDF and ESF is also provided. As explained, it is not possible to identify one global sum of all ESIF health investments 2014-2020. Therefore the total sum obtained from the following chart has to be interpreted with caution. Even though the amounts from the ERDF investments are devoted to health infrastructure and e-health (where the latter include also e-care and ambient assisted living), the European Social Fund investments in active and healthy ageing and access to health and social services may include also non-health related interventions, linked with social investments or with active ageing investments.

29 The ‘0’ figure means that these countries do not present any budget associated to the 4 health-related categories of intervention. However, these countries are investing ESIF in health within investments falling under one or other sectors –R&D, support to SMEs, employment, education and institutional capacity building. These sectors are linked to broader budget categories where health investments cannot be isolated.

Note: The categories 107 and 112 financed by ESF contain health but may include also social (111) and active ageing (107) related investments, whereas the categories 053 and 081 financed by ERDF contain specific health investments.
Below, main figures from the table presented on the previous page are illustrated graphically.

**Chart 14: Total allocation to categories 053, 081, 107 and 112 in each Member State of the EU**
On the basis of the analytical part, one can conclude that health is a sector overlapping with many different areas, such as social investments, education, employment, R&D. The categories of interventions, enabling to calculate the financial resources, are not health-specific (with the exception of health infrastructure and e-health). Therefore the exact scope of health-related ESIF investments and financial resources allocated for these investments are difficult to identify on the basis of the programming documents.

The individual country sheets, presented on the following pages, give more details about programmed investments in all EU Member States. Even though financial figures are focused on four categories of intervention with a health component the analysis outlines a deeper view on possible investments in health care area and shows also other related fields (such as social area, R&D etc.).
AUSTRIA

GDP of Austria amounts to €307b. Austrian GDP per capita (in PPS) represents 130% of the EU28 average.
Health sector spending amounts to ca. 11.5% of the country’s GDP.
Healthy life expectancy of males / females reaches 78.4 / 83.6 years which represents 103% / 101.7% of the EU28 average.*

Programming period 2014-2020

All but one of the Austrian regions are categorized as ‘more developed regions.’ The Burgenland region is categorized as a ‘transition region.’ Compared to the 2007-2013 programming period, there has been a change in the organizational scheme of ESIF management from individual Regional Operational Programmes (ERDF) towards one country-wide ERDF national programme. There is also one country-wide ESF national programme.

<table>
<thead>
<tr>
<th>OP scheme</th>
<th>1 / 2 national OPs</th>
<th>0 / 0 regional OPs</th>
</tr>
</thead>
</table>

Role of MoH in ESIF implementation:
To a limited extent, the Austrian Federal Ministry of Health is to be involved in development and implementation of ESIF in 2014-2020. Yet, the Ministry is not to act as a Managing Authority or an Intermediate Body for implementation of health priorities under ESIF.

Financial allocations which include health:

</tr>
</tbody>
</table>

Total: €23 700 000

Scope of investments: Active and healthy ageing[1]
- Support of R&D activities, provision of information and consultancy services in the design of ‘age-friendly’ and healthy workplaces
- Provision of counselling to companies and employees about long-term health maintenance and primary prevention
- Supporting businesses in establishing generational health management in the context of secondary prevention

For more detailed information about the health-relevant OP, please, see the following page.

* Sources of Information (respectively): Eurostat Statistics Database; The Economist Data, unless otherwise indicated, refer to the year ending 31 December 2012. Life expectancy by gender at birth reflects the year 2012.
** Number of OPs that include health vs. total number of OPs adopted for 2014-2020 programming period.
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

AUSTRIA

Programming period 2007-2013

In the 2007-2013 programming period, all but one of the Austrian regions fell under the ‘competitiveness and employment objective.’ The Burgenland region was categorized as a ‘phasing-out region’.

OP scheme: 0 / 1 national OP*  2 / 10 regional OPs*

Role of MoH in SF implementation: The Austrian Federal Ministry of Health had no formal role in implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**: € 0

Scope of investments: Although no allocation to health projects was identified or planned, some projects with health-relevance were implemented in the following area(s):

Health tourism[1,2]

- Health tourism initiative supporting development of wellness or health services in the Burgenland region
- Health tourism initiative developed in the mountains of Austria aimed at helping those suffering from asthma and / or allergies

Source of funding:

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
Belgium

GDP of Belgium amounts to €376b. Belgian GDP per capita (in PPS) represents 120% of the EU28 average. Health sector spending amounts to ca. 10.8% of the country’s GDP. Healthy life expectancy of males / females reaches 77.8 / 83.1 years which represents 102.2% / 101.1% of the EU28 average. *

**Programming period 2014-2020**

The regions of Flanders and Brussels are both categorized as ‘more developed regions.’ In Wallonia, only the Wallonia Brabant region is categorized as ‘more developed’; other Wallonia regions fall within ‘transition regions’ (Hainaut, Namur, Liège, and Luxembourg).

**OP scheme:**
- 0 / 0 national OPs
- 7 / 7 regional OPs

**Role of MoH in ESIF implementation:**
In Belgium, the health agenda is a competency of the Ministry of Social Affairs, Public Health & Environment. The Ministry is not directly involved in the implementation of ESIF in 2014-2020.

**Financial allocations which include health:**
0 €

**Scope of investments:**
Although no direct allocation to health priorities has been identified, some health-relevant projects could be implemented in the following areas:

- **Medical R&D** [1,2]
  - Support of R&D in various medical areas (biomarkers, diagnostics in vitro and in vivo, innovative tools and equipment, medication administration systems, innovative therapies, IT applied to human health, medical equipment, pharmaceutical research, and organizational innovations)
  - Support of innovative care initiatives which focus on all aspects of elderly care, including prevention, awareness, detection and intervention
  - Promotion of connecting the health system with the system of clinical trials and the innovative pharmaceutical industry with particular focus on areas such as neurodegenerative and infectious diseases, new opportunities in molecular diagnostics, and other medical technologies (such as nanotechnology)

- **Improving employability of vulnerable groups** [4,5,6,7]
  - Activities increasing employability of people with health issues, e.g. disabled people
  - Integration of marginalized communities such as Roma, with programmes focusing on employment, education and healthy housing

- **Healthy workforce** [4]
  - Measures aimed at a healthy workplace and retaining the elderly workforce in the labour market

- **Education and training of medical staff** [4,7]
  - Training and re-training of workers, provision of information regarding employment opportunities as a response to the structural shifts in the labour market. Health care is one of the areas of focus in terms of preparing for the long term demands for human resources in the sector

- **E-health** [3]
  - Investments in innovation in health (including e-health)

**Source of funding:**

For more detailed information about the health-relevant OP, please, see the following page.

---

* Sources of information (respectively): Eurostat Statistics Dataset, The Economist Data, unless otherwise indicated, refers to the year ending 31 December 2012. Life expectancy by gender at birth reflects the year 2012.

Belgium

Programming period 2007-2013

In the 2007-2013 programming period, all but one of the Belgian regions fell under the 'competitiveness and employment objective.' Only the Hainaut region in Wallonia was categorized as a 'phasing-out region.'

OP scheme:

- 0 / 1 national OP
- n/a / 9 regional OPs

Role of MoH in SF implementation:

The Ministry of Social Affairs, Public Health & Environment had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health:

- €0

Scope of investments:

Although the allocation to health priorities could not be assessed, Belgium put great emphasis on innovations and R&D in the Life Sciences sectors. The following types of projects were eligible for funding in Belgium in the 2007-2013 programming period:

- Participation of Life Sciences R&D organizations in university-business collaboration projects
- Setting up or improving functioning of highly specialized LS institutes
- Establishment of training centres supporting research and development in the field of biomedical sciences

Source of funding:

[1] Regional operational programmes (source: mainly ERDF)

[MAs: regional administrations]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.
BULGARIA

GDP of Bulgaria amounts to €40b. Bulgarian GDP per capita (in PPS) represents 47% of the EU28 average.

Health sector spending amounts to ca. 7.4% of the country’s GDP.

Healthy life expectancy of males / females reaches 70.9/ 77.9 years which represents 93.2% / 94.8% of the EU28 average.*

Programming period 2014-2020

There is no change in Bulgarian regions’ categorization but reflecting the new nomenclature; all of its regions fall under the category of ‘less developed regions.’

Role of MoH in ESIF implementation: The Bulgarian Ministry of Health is to be a beneficiary of projects implemented under Operational Programmes Human Resource Development and Regions in Growth in 2014-2020.

Financial allocations which include health:

Scope of investments:

**E-health**
- Establishment of a national health information system
- Investment into the ICT/Communication systems (including telemedicine) used by emergency health services

**Community-based care**
- Provision of support services, including integrated cross-sectoral services in the community or at home services for early childhood development, prevention and early intervention for children, the elderly and for people with disabilities and other vulnerable groups
- Provision of the necessary resources and services to eliminate the institutional model of care for children and the elderly by creating networks of social services and cross-community services
- Development of foster care and other preventive and alternative forms of care and services
- Provision of support to socially or medically challenged (e.g. disabled) people to get back to work

**Increase the number of persons from vulnerable ethnic groups involved in health and social services**
- Improving the access to and provision of quality health and social services, including integrated cross-sectoral services, according to the specific needs of the target group
- Personalized advice and social health mediation of representatives of the target groups
- Raising awareness about the social and health rights, promoting family planning and responsible parenthood
- Improving access to employment thorough psychological support and other types of support
- Supporting health education and other health programmes directed at the Roma minority

**Transnational cooperation**
- Promoting transnational cooperation by exchanging experience, best practices and models about long-term care of people who are unable to look after themselves, about people with disabilities, and about reduction of the number of children, young people and adults who are placed in institutions

**Education and training**
- Training and professional development of human resources engaged in the health sector
- Increasing effectiveness of administrative and executive staff in public administration and health sector

**Support for SMEs in health sector**
- Promotion of SMEs in the area of creative and cultural industries with focus on enterprises developing new products and services related to the ageing population, health care, social entrepreneurship

*** Although the priority axis of respective OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Bulgaria, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as 'n/a'.

BULGARIA

Programming period 2007-2013

All of the Bulgarian regions fell under the ‘convergence objective’.

OP scheme: 3 / 7 national OPs * 0 / 0 ROPs *

Role of MoH in SF implementation: In the 2007-2013 programming period, the Ministry of Health was a beneficiary of projects implemented under the Operational Programmes Regional Development and Human Resource Development.

Financial allocation which include health**: € 70 163 857

Scope of investments:

E-health[3]

- Investment in e-health concepts

Health infrastructure[3]

- Strengthening of the social infrastructure in the underdeveloped regions
- Development of sustainable, local and approachable city centres through modernization of infrastructure and equipment of the health care institutions for primary, emergency, specialized outpatient, and hospital aid

Health services[3]

- Restructuring inpatient specialist care
- Development of monitoring systems, evaluation of the efficiency, and evaluation of the influence of health care services, and also introduction of good practices and activities of institutions and suppliers in the area of health care services

Health promotion and prevention[2]

- Public informational promotional and preventive health care campaigns
- Development and implementation of campaigns with screening and early diagnosis of socially significant diseases

Source of funding:

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
CROATIA

GDP of Croatia amounts to €46b. Croatian GDP per capita (in PPS) represents 61% of the EU28 average. Health sector spending amounts to ca. 7.3% of the country's GDP. Healthy life expectancy of males / females reaches 73.9 / 80.6 years which represents 97.1% / 98.1% of the EU28 average.*

Programming period 2014-2020

Both Croatian regions fall under the category of 'less developed regions.'

<table>

<td>112</td>
<td>€ 180 000 000</td>
</tr>
</tbody>
</table>

Total: € 368 486 057

Scope of investments:

**Medical R&D**(1)
- Creation of Medical Sciences research infrastructural platform (RIP) to engage in R&D activities related to health and medicine (biotechnology, nano-medicine)

**E-health**(1)
- Development of integrated information system for the Croatian Health Insurance Company, development of e-directives, e-drug prescription, implementation and upgrade of the DRG payment system
- Relevant education and training of staff in areas such as telemedicine or mHealth

**Improving access to primary and emergency health care**(2)
- Investments in primary care infrastructure and equipment, improving emergency health care services
- Acquiring the medical equipment and vehicles necessary to provide primary health care
- Renovation or construction of infrastructure necessary for ensuring efficient operations of PHC team

**Medical & health education**(1)
- Support of education in family medicine, radiology and emergency medicine in Community Health Centres in the target areas and stimulation of professionals to accept the employment in less attractive areas
- Support of vocational education and training (VET) schools to ensure relevance of VET in line with labour market needs and improved access to higher education
- Support of continuous professional development of VET teachers

**Improving employability of vulnerable groups**(1)
- Activities increasing the labour force participation rate of people with health issues, e.g. disabled people, war veterans, or the Roma minority

**Increasing effectiveness and capacity in public administration**(2)
- Support of the accreditation process of health facilities
- Capacity building of social partners related to specialization in different areas, e.g. health and social services

**Healthy workforce**(2)
- Programmes aimed at increasing occupational health and safety including collecting and analysing data and providing guidance based on the results of studies
- Support of occupational health and safety of health professionals by providing training and necessary equipment for their protection at work

Note:

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.
Programming period 2007-2013

Cyprus as a country represented one region which fell under the 'phasing-in region.'

OP scheme:
- 2 / 2 national OPs*
- 0 / 0 regional OPs*

Role of MoH in SF implementation:
The Ministry of Health of the Republic of Cyprus had no formal role in the implementation of Structural Funds in 2007-2013. Health investments managed by the Ministry were mainly financed from the EU community action programmes (Interreg IIIA and IIIB).

Health allocation**:
- €n/a***

Scope of investments:
Although there was no allocation to health projects identified or planned, some projects with health-relevance were implemented in the following area(s):
- **E-health**[1]
  - Promotion of e-health through interventions that involve linking central hospitals to medical centres in rural areas and that also foster the implementation of important measures included in the National Reform Programme, such as expansion of the broadband network, e-commerce, etc.
- **Health infrastructure strengthening**[1]
  - Strengthening of primary and secondary care in rural areas
  - Strengthening of independent and hospital specialist secondary and / or tertiary care centres / infrastructures in large towns
- **Medical staff training**[2]
  - Promotion of specific interventions to upgrade health workers’ skills within an integrated system of continuing training for medical staff and health professionals in general, especially in view of the needs created by the introduction of the National Health System
- **Health tourism**[1]
  - Development of health tourism through interventions which help to enrich the tourist product and upgrade services

Source of funding:
[1] Sustainable development and competitiveness Operational Programme (source: ERDF and CF)
  [MA: Planning Bureau]
  [MA: will be specified later]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health-infrastructure allocation only.
*** Only indirect health sector investments; health sector % of total allocated SF is unknown.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
CZECH REPUBLIC

GDP of Czech Republic amounts to €152b. Czech GDP per capita (in PPS) represents 81% of the EU28 average.

Health sector spending amounts to ca. 7.7% of the country’s GDP.

Healthy life expectancy of males / females reaches 75.1 / 81.2 years which represents 98.7% / 98.8% of the EU28 average.*

Programming period 2014-2020

Czech regions fall under the category of ‘less developed regions,’ with an exception of the capital which is a ‘more developed region.’

OP scheme:

5 / 7 national OPs**

0 / 0 regional OPs**

Role of MoH in ESIF implementation:

In 2014-2020, the Czech Ministry of Health is to be involved as a subject-matter expert body in implementation of health priorities under selected operational programmes. Yet, the Ministry will no longer act as an intermediate body in ESIF implementation. At the same time the Ministry is to be a beneficiary of some projects implemented under OP Employment and Integrated Regional Operational Programme.

Financial allocations which include health:

| Category 053: | € 283 518 885 |
| Category 081: | € 13 209 914 |
| Category 107: | n/a |
| Category 112: | € 213 506 743 |
| Total: | € 510 235 542 |

Scope of investments:

- E-health[^1,^2,^3,^4,^5]
  - Improved ICT applications within the health sector
  - Aim to improve interoperability of health systems in order to provide easier access to information, decrease costs, and improve efficiency of the system

- Community-based care[^4]
  - Developing community based support to help disadvantaged groups enter the labour force
  - Supporting the development of community centres, social housing, and social enterprises
  - Deinstitutionalization of psychiatric care
  - Development of community based health care infrastructure

- Preventing social exclusion of people with social or medical challenges[^1,^2,^3,^4,^5,^6,^7,^8]
  - Supporting socially excluded and vulnerable groups (including Roma, disabled people, and people with issues related to substance abuse) to become more engaged in the society, supported programs include community activities, counselling, career guidance[^2,^7]
  - Providing resources to socially excluded groups to obtain education and enter the workforce[^1,^2]
  - Strengthening the competencies of teaching staff at all levels for inclusive education[^5]
  - Provision of social and health care services[^1,^2,^7]
  - Programmes promoting healthy ageing[^4]
  - Programmes for prevention of crime and socially pathological phenomena; programmes for people leaving prisons and for people serving sentences in prisons, probation or social rehabilitation programmes; programmes for social and legal protection[^1]

- Enhancing emergency services as part of disaster preparedness[^4]
  - Emergency services are potential beneficiaries of disaster preparedness programmes

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.
The following categories of interventions were considered as relevant for quantification of country allocation to health:
- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health-related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In the Czech Republic, only indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not have been unambiguously assessed and were marked as ‘n/a’.

CZECH REPUBLIC

Programming period 2007-2013

All but one of the Czech regions fell under the ‘convergence objective.’ The region of the capital Praha was a region under the ‘competitiveness and employment objective.’

OP scheme: 2 / 8 national OP* 9 / 9 regional OPs*

Role of MoH in SF implementation: The Czech Ministry of Health acted as an Intermediate Body for the Integrated Operational Programme. The Ministry of Health was also a beneficiary of projects implemented under Integrated OP.

Financial allocation which include health: € 418 193 524

Scope of investments:

Health infrastructure[2]
- Redevelopment and reconstruction of existing buildings, modernisation and redevelopment of public services infrastructure, equipment purchase with a view to technological developments and increasing the quality of services
- Modernisation and revision of equipment in regional health institutions
- Reconstruction, modernisation of, and equipment purchase for, institutions caring for the elderly citizens

E-health[1]
- ICT solutions in health care
- Development of information society and smart administration, implementation of direct material support such as development of applications

Healthy workforce and healthy lifestyle[1,3]
- Improving occupational health and safety and promoting healthy lifestyles
- Improving health protection and illness prevention, helping to increase the number of healthy workforce among the Czech population and to extend the productive lives of employees

Source of funding:

[1] Integrated OP (sources: ERDF)
(MA: Ministry for Regional Development)

(MA: Ministry of Labour and Social Affairs)

[3] ROPs (sources: ERDF)
(MAs: regional councils)

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Present financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante (http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm). Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
DENMARK

GDP of Denmark amounts to €245b. Danish GDP per capita (in PPS) represents 126% of the EU28 average.
Health sector spending amounts to ca. 11.2% of the country’s GDP.
Healthy life expectancy of males / females reaches 78.1 / 82.1 years which represents 102.6% / 99.9% of the EU28 average.*

Programming period 2014-2020

Denmark is newly divided into five NUTS-2 regions, with all but one falling under the category of ‘more developed regions.’ Sjælland is a ‘transition region.’

| OP scheme: | 1 / 2 national OPs** | 0 / 0 regional OPs** |
| Role of MoH in ESIF implementation: | The independent Ministry of Health was established in 2011, overtaking health-related responsibilities from the prior Ministry of Interior and Health. The Danish Ministry of Health will not act as a Managing Authority or as an Intermediate Body for implementation of health priorities under ESIF. |
| Financial allocations which include health: | € 0 |
| Scope of investments: | Although no direct allocation to health priorities has been identified, some health-relevant projects could be implemented in the following areas: |

** Helping the disabled[1]**
- People incapable of employment will be offered disability pension but also a help in terms of social services and health specialists

** Education and training[1]**
- Competency of staff in cooperation with other companies within selected areas, which contributes to achieving the company's growth potential, such as internationalization, low-carbon economy, resource recovery, climate change adaptation, automation / digitization, health and welfare solutions or information and communications.

DENMARK

Programming period 2007-2013

The whole country of Denmark was classified as one region which was under the 'competitiveness and employment objective.'

OP scheme: 2 / 2 national OPs* 0 / 0 regional OPs*

(country level = NUTS 2 level)

Role of MoH in SF implementation: By 2011, the health agenda was under the Ministry of Interior and Health. The Ministry had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**: €0

Scope of investments: Although there was no allocation to health projects identified or planned, some projects with health-relevance were implemented in the following area(s):

- **E-health**[1]
  - Maintaining high level of public service through measures such as developing and increasing digital health care

- **Healthy workforce**[2]
  - Focusing on the use of scarce Structural Fund resources on the part of the occupational safety and health concept that directly results in reduced absence due to illness
    - Efforts to reduce absence due to illness could potentially contribute both to increasing the effective supply of labour and quality of work for seniors and other groups

Source of funding:

Scope of investments:

- Improving access to primary health care
  - Investment in regional hospitals, new technology, and technology development
  - Development of competency centres (pathology, psychiatry, children’s clinic, ear clinic)
  - Creation of additional nursery and childcare places
  - Support of networking between competency centres and smaller hospitals
  - Continuation of the “Back to health care” project through which doctors and nurses with relevant diploma but no registration will be brought back to health care sector
  - Follow-up care provision to young people to ensure smooth transition to labour market
  - Early detection of alcohol abuse, brief counselling, alcohol addiction treatment and internet-based counselling will be provided to alcohol abusers and their relatives

- Availability and diversity of childcare services
  - Development of services across municipal boundaries (day care, social transportation, support persons)
  - Increased employment of parents who have received childcare services and support services for children with disabilities

- E-health
  - Introduction of new technology and the development of e-services in cooperation with different parties and sectors
  - Promotion of the reusability of data and technology
  - Activities to support the interoperability of institutions and sectors both domestically and internationally

- Community-based care
  - Support for temporary replacement of family physicians and nurses
  - Deinstitutionalisation through community-based services such as day care centres, building family houses
  - Development of welfare infrastructure (social transportation, day care, personal assistant, home care)

Source of funding:

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.
ESTONIA

Programming period 2007-2013

Estonia represented one region which fell under the 'convergence objective.'

OP scheme: 3 / 3 national OPs* 0 / 0 regional OPs*

Role of MoH in SF implementation:
In Estonia, the health agenda is under the Ministry of Social Affairs. The Ministry of Social Affairs in Estonia acted as an Intermediate Body for the Operational Programme Human resources development.

Financial allocation which include health**:
€145 716 641

Scope of investments:

**E-health**[1]
- To facilitate information exchange between the service providers and to improve the quality and availability of data necessary for monitoring and planning
- Development of infrastructure (computerisation, IT-developments, security systems), standardising (implementation of international classifications, implementation of medical standards, integration of clinical guidelines into information systems), ensuring the protection of personal data and security (security requirements, legal system, supplementing of legal space)

**Health infrastructure**[2]
- Optimisation of the central and regional hospital infrastructure by concentrating specialized medical care stationary into one complex, and thereby reducing the duplication of technology and personnel
- Priority was given to hospitals located in regions with less favourable socioeconomic situation

**Health promotion and disease prevention**[3]
- Preparation of health strategies and development and implementation of action plans at county level according to the analysis of the public health situation and local needs
- Activities aimed at promoting healthy lifestyles and addressing the low physical activity of people, unhealthy nutrition, consumption of addictive substances (including tobacco, alcohol, drugs)
- Improvement of availability of services, means, information and knowledge on local level and strengthening of cooperation among public, private, and third sectors

**Access to health care and improved health services**[3]
- Decline of the share of hospital treatment and increase of the need for illness prevention, chronic disease monitoring and treatment-related primary care level services, according to the demographic and epidemiological trends and technological development
- Strengthening of family doctor care, nursing care, rehabilitation and disease-preventive health care services

Source of funding:

(MA: Ministry of Finance of the Republic of Estonia)
(MA: Ministry of Finance of the Republic of Estonia)

Note:
* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.
FINLAND

GDP of Finland amounts to €193b. Finnish GDP per capita (in PPS) represents 115% of the EU28 average.

Health sector spending amounts to ca. 9.1% of the country’s GDP.

Healthy life expectancy of males / females reaches 77.7 / 83.7 years which represents 102.1% / 101.8% of the EU28 average.*

Programming period 2014-2020

All Finnish regions fall under the category of ‘more developed regions’.

OP scheme: 1 / 1 national OP** 0 / 1 regional OP**

Role of MoH in ESIF implementation: In the 2014-2020 programming period, the Ministry of Social Affairs and Health is to act as an Intermediate Body for the ESF component of the OP Sustainable growth and jobs 2014-2020.

Financial allocations which include health: € 0

Scope of investments: Although no direct allocation to health priorities has been identified, some health-relevant projects could be implemented in the following areas:

- **Medical R&D**[1]
  - Support of regional R&D activities including in fields such as biotechnology, nanotechnology, well-being and health

- **Preventing social exclusion of people with disabilities**[1]
  - Provision of health services, substance abuse services, and other social services to persons with disabilities, chronically ill, and ethnic minorities
  - Support for strengthening of own resources, peer support, community-service solutions, and self-reliance
  - Rehabilitation service providers will be one of the beneficiaries

Source of funding: [1] Sustainable growth and jobs 2014-2020 - Structural Funds Programme of Finland (sources: ERDF and ESF)

For more detailed information about the health-relevant OP, please, see the following page.

* Sources of information (respectively): Eurostat Statistics Database; The Economist Data, unless otherwise indicated, refer to the year ending 31 December 2012. Life expectancy by gender at birth reflects the year 2012.

** Number of OPs that include health vs. total number of OPs adopted for 2014-2020 programming period.

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Finland, only indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

Programming period 2007-2013

All but one of Finnish regions fell under the ‘competitiveness and employment objective.’ Itä-Suomi was a ‘phasing-in region.’

OP scheme:
- 0 / 0 national OP*
- 1 / 7 regional OPs*

Role of MoH in SF implementation:
In the 2007-2013 programming period, the Ministry of Social Affairs and Health acted as an Intermediate Body for the ESF Operational Programme for Continental Finland 2007-2013. The Ministry of Social Affairs and Health has not been a beneficiary of ESF funding.

Financial allocation which include health**:
€ 0

Scope of investments:
Although there was no allocation to health projects identified or planned, some projects with health-relevance were implemented in the following area(s):

Cooperation with SMEs [1]
- Promotion of cooperation in nationally important clusters, which have internationalisation potential (e.g. social and health services)

Source of funding:
[1] ROP Eastern Finland (source: ERDF)
[MA: Ministry of Employment and the Economy]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
FRANCE

GDP of France amounts to €2032b. French GDP per capita (in PPS) represents 108% of the EU28 average.

Health sector spending amounts to ca. 11.7% of the country's GDP.

Healthy life expectancy of males / females reaches 78.7 / 85.4 years which represents 103.4% / 103.9% of the EU28 average.*1

Programming period 2014-2020

The inland regions of France fall under the category of ‘more developed regions’ (11) or ‘transition regions’ (10). The overseas territories Martinique, French Guyana, Réunion, Guadeloupe and Mayotte are ‘less developed regions.’

OP scheme: 2 / 3 national OPs** 25 / 37 regional OPs**

Role of MoH in ESIF implementation: In France, health agenda is under the Ministry of Social Affairs, Health and Women’s Rights. The Ministry is not to act as a Managing Authority nor as an Intermediate Body for implementation of health priorities under ESIF.

Financial allocations which include health:

Scope of investments:

- **Active and healthy ageing**[1]
  - Development of tools, practices and favourable plans for continued employment of senior citizen, second career management programmes
  - Launch and implementation of experimental and innovative actions related to active ageing

- **Improving employability of vulnerable groups**[2]
  - Provide personalized and comprehensive support tailored to vulnerable youth (college dropouts)
  - Offer professional training (or experience via internship) and social support (health, housing, mobility)

- **Types of investments under regional operational programmes**[3]
  - Investments in health infrastructure
  - ICT applications strengthening (e-health)
  - Access to sustainable and high-quality services
  - Active and healthy ageing

Note: ROPs cover approx. 82% of funding allocated for health investments from ESIF in France.

Role of MoH in SF implementation: Minister of Social Affairs, Health and Women’s Rights in France had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**:

€ 20 728 000

Scope of investments:

**Health infrastructure**

- Modernisation of existing structures, particularly in rural areas and regarding groups at risk

**Access to health**

- Improving access to health care services for older people and those with disabilities in the four overseas territories

Source of funding:

[1] ROPs (sources: ERDF)

[MAs: regional administrations]

---

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Santa [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
GERMANY

GDP of Germany amounts to €2666b. German GDP per capita (in PPS) represents 123% of the EU28 average.

Health sector spending amounts to ca. 11.3% of the country’s GDP.

Healthy life expectancy of males / females reaches 78.6 / 83.3 years which represents 103.3% / 101.3 % of the EU28 average.*

Programming period 2014-2020

Most of the German regions fall under the category of ‘more developed regions.’ Lüneburg, Mecklenburg-Vorpommern, Brandenburg, Sachsen-Anhalt, Thüringen, Chemnitz and Dresden are ‘transition regions.’

Scope of investments:

Disease prevention and healthy workforce[1]
- Testing in the area of disease prevention
- Preventive measures for safe and healthy work

Improving employability of vulnerable groups[1]
- Activities increasing employability of people with health issues, e.g. mental or other health problems

Education and training[1]
- Strengthening of lifelong learning, particularly sensitive to demographic research work, media literacy and the networking of local / regional educators (improvements expected in areas of disease prevention, innovation capability of SMEs, and other areas)

Types of investments under regional operational programmes[2]
- Investments in health infrastructure
- ICT applications strengthening (e-health)
- Access to sustainable and high-quality services

Note: ROPs cover approx. 100% of funding allocated for direct health investments from ESIF in Germany.

Source of funding:

***Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care services and support of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any other discrimination.

In Germany, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

**GERMANY**

**Programming period 2007-2013**

German regions’ level of development followed the former division of the country. All but one of the former Western regions fell under the ‘competitiveness and employment objective.’ Lüneburg, Brandenburg-Südwest, Halle and Leipzig were ‘phasing-out regions.’ Mecklenburg-Vorpommern, Brandenburg-Nordost, Magdeburg, Dessau, Thüringen, Chemnitz and Dresden were ‘convergence regions.’

**OP scheme:**

- **0 / 3 national OP**
- **n/a / 34 regional OPs**

**Role of MoH in SF implementation:**

The Federal Ministry of Health in Germany had no formal role in the implementation of the Structural Funds in 2007-2013.

**Financial allocation which include health:**

€17 550 000

**Scope of investments:**

1. **Health infrastructure**
   - Development of infrastructure (including health infrastructure) to promote sustainable growth

2. **Health promotion**
   - Health promotion at work and occupational health and safety programmes to improve the general conditions of employees in less-developed areas

**Source of funding:**

1. ROPs (source: ERDF, ESF)
2. [MAs: Bundesland Ministries]

---

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Present financial figures refer to health infrastructure allocation only.

Note:

The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
GREECE

GDP of Greece amounts to €194b. Greek GDP per capita (in PPS) represents 76% of the EU28 average.

Health sector spending amounts to ca. 9.3% of the country’s GDP.

Healthy life expectancy of males/females reaches 78/83.4 years which represents 102.5%/101.5% of the EU28 average.*

Programming period 2014-2020

Greek regions fall under various objectives of Cohesion Policy. Attiki and Notio Aigaio are ‘more developed regions.’ Dytiki Makedonia, Sterea Ellada, Peloponnisos, Ionia Nisia, Kriti and Voreio Aigaio are ‘transition regions.’ Anatiliki Makedonia Thraki, Kentriki Makedonia, Thessalia, Ipeiros and Dytiki Ellada are ‘less developed regions.’

OP scheme: 3/5 national OPs** 13/13 regional OPs**

Role of MoH in ESIF implementation:

Ministry of Health has a steering function for both national and regional OPs in 2014-2020 period (i.e. “executive unit” for ESIF). MoH is also to act as a beneficiary in case of national OPs.

Financial allocations which include health:

<table>

<td>112</td>
<td>€ 235 719 322</td>
</tr>
</tbody>
</table>

Total: € 367 456 447

Scope of investments:

E-health[1]

- Operation of the Primary Health Care Information System, development of Electronic Patient File
- Import of modern purchasing procedures—procurement centralization

Quality management[1]

- Strengthening the National Strategy for Health Protection and Empowerment of the Established Unified Healthcare Fund (EOPYY), design and implementation of System of Measurement and Evaluation of Effectiveness in the Health Sector
- Internal Control Systems and Process Support Actions will be completed where necessary with e-Government infrastructure, support for systems and procedures for internal audit

Health services[1]

- Improvement of services in health (strengthening of health infrastructure and public services, operational support, information system and digital modernization of the health system)

Health tourism[1]

- Promoting spa-health tourism, increasing service offering, prolonging active season, quality improvement

Medical R&D[1]

- Development of internationally competitive pharmaceutical products, medical technologies advanced systems, applications, and services in the health sector (innovative products and innovative health, medical, diagnostic and imaging services, bio-informatics, micro / nano biomedical systems and devices)

Types of investments under regional operational programmes[4]

- Investments in health infrastructure
- ICT applications strengthening (e-health)
- Access to sustainable and high-quality services

Note: ROPs cover approx. 100% of funding allocated for direct health investments from ESIF in Greece.

Source of funding:

[1] Reform of the Public Sector Operational Programme (sources: ERDF and ESF)
[3] Competitiveness, entrepreneurship and innovation Operational Programme (sources: ERDF and ESF)
[4] ROPs (sources: ERDF and ESF)

Note:
GREECE

Programming period 2007-2013

Majority of Greece’s regions fell under the ‘convergence objective.’ Attiki, Dytiki Makedonia and Ksentriki Makedonia were ‘phasing-out regions.’ Notio Aigaio and Sterea Ellada were ‘phasing-in regions.’

OP scheme: 3 / 9 national OPs*  n/a / 5 regional OPs*

Role of MoH in SF implementation:  n/a

Financial allocation which include health: €445 682 500

Scope of investments:

- Health infrastructure: Improving the responsiveness of secondary health care and the quality of services provided
- Construction support of hospital infrastructure to lift regional disparities and develop special services

- Health services:
  - Interventions in primary health care focusing on the development of city health centres in big urban complexes, as well as on the improvement of equipment and conditions of care prevailing in the rural health centres
  - Public health network development through activating existing structures – staffing of Regional Public Health Laboratories (PEDY), prompt operation of the coordinating central laboratory (Central Public Health Laboratory – KEDY), activation of the National Public Health Council (ESDY), development of the National Centre for Health Operations (EKEPY) – and by activation of the National Blood Donation Centre (EKEA), as well as by training professionals of the public health sector
  - Mental health reform, community-based care promotion, and development of reintegration policies

- E-health:
  - Introduction of e-health services (home treatment, smart electronic cards, e-learning, e-procurement, infrastructures, high-tech devices, telemedicine, etc.)

- Health promotion and disease prevention:
  - Synergy of the public and voluntary sector with targeted training and communication actions within the framework of the National Health System (ESY)

- Education and training:
  - Training, specialization and further training of human resources engaged in the health sector

- Health monitoring:
  - Development of a system to monitor key health factors

- Health tourism:
  - Development of skills of medical professionals, supporting private investments in the tourism sector, including plans to enhance and support health tourism, and to develop health tourism centres

Source of funding:

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/healthstructural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
HUNGARY

GDP of Hungary amounts to €97b. Hungarian GDP per capita (in PPS) represents 67% of the EU28 average.

Health sector spending amounts to ca. 7.8% of the country’s GDP.

Healthy life expectancy of males / females reaches 71.6 / 78.7 years which represents 94.1% / 95.7% of the EU28 average.*

Programming period 2014-2020

There is no change in the categorization of Hungarian regions but reflecting the new nomenclature; all but one of its regions fall under the category of ‘less developed regions.’ The Közép-Magyarország region is a ‘more developed region.’

<tr>
<td>Total:</td>
<td>€ 482 726 813</td>
<td></td>
</tr>
</tbody>
</table>

Scope of investments:

Increasing health awareness[1]
- Awareness-raising programs aimed at prevention and reduction of drug use and disease and injury prevention
- Central and local events promoting public health and healthy lifestyles

Improving health services[1,2,3]
- Investments in disease screening and treatment measures
- Chronic diseases management programs
- Development of the outpatient care services (e.g. outpatient care, day surgery)
- Modernization of the child health care institutions, and development of the missing child and youth health care centres
- Modernization of local government’s primary health care services
- Purchase of equipment, taking into account the use of environmentally friendly technologies and materials
- Improving access to health care, disease prevention and health promotion systems associated with healthy lifestyle opportunities

Community-based care[2]
- Modernization of residential service institutions

Education and training of medical staff[2]
- Education and training programmes aimed at providing the health sector with qualified professionals including primary and specialized care workers, family doctors and physicians
- Promoting medicine as the field of study among students, also in the form of scholarships

E-health[3]
- Development of community access points, targeted at groups lacking digital competencies and vulnerable citizens mainly in towns with less than 5 000 people

Health tourism[4]
- Increasing demand for health tourism services using a range of special tools

Source of funding:

For more detailed information about the health-relevant OP, please, see the following page.

* Sources of information (respectively): Eurostat Statistics Database; The Economist Data, unless otherwise indicated, refer to the year ending 31 December 2012. Life expectancy by gender at birth reflects the year 2012.

** Number of OPs that include health vs. total number of OPs adopted for 2014-2020 programming period.
Note: The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents. The following categories of interventions were considered as relevant for quantification of country allocation to health:

- Health Infrastructure
- ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- Active and healthy ageing
- Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Hungary, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as 'n/a'.

** Planned allocations are predominantly covering non-health interventions; the planned health allocation could not be assessed.

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.
The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Hungary, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

HUNGARY

Programming period 2007-2013

All but one of Hungarian regions fell under the ‘convergence objective.’ The Közép-Magyarország region was a ‘phasing-in region.’

OP scheme: 2 / 8 national OPs* n/a / 7 regional OPs*

Role of MoH in SF implementation:
In the 2007-2013 programming period, implementation of health projects supported from the Structural Funds was in competency of the National Institute for Quality and Organisational Development in Health Care and Medicines (GYEMSZI). GYEMSZI was an executing agency mandated to implement health projects under the Social Renewal Operational Programme and Social Infrastructure Operational Programme.

Financial allocation which include health**:
€1 336 461 888

Scope of investments:
Health infrastructure
- Infrastructural development of cardiovascular care
- Infrastructure development in universities and top institutions aimed at restructuring the specialist care structure (beyond Budapest, including the University of Debrecen, the University of Sciences of Pécs, and the University of Sciences of Szeged)

Inpatient and outpatient care
- Procurement and development of imaging and other diagnostic machines and equipment and the replacement of outdated devices
- Implementation of a modern regional oncological network, modernisation of tumour-diagnostics; establishment of databanks; laying the foundations of the tele-pathological network; modernisation and accreditation of the asset base of radiation therapy centres; development of domiciliary cares (hospice) within the integrated oncological in-patient-specialist care system
- Network coordination tasks performed by county outpatient-specialist care centres in direct communication with smaller regional outpatient-specialist care centres using ICT and telemedicine
- Definitive care, general and special diagnostic services, screening programmes, specialist consultation hours, and day care (surgery, therapy, diagnostics, cure-like cares)

Emergency services
- Integration and modernization of services provided at scattered sites with obsolete and outdated facilities

E-health
- Development of intramural patient identification systems (patient access control, eligibility data upgrading, patient exit control)
- Development of Electronic Certified Public Records and Sectoral Portal

Health promotion
- Development of life-style programmes promoting health, and knowledge related to modern health development based on evidence for various levels of education

Education and training
- Improvement of employability, integration of workers into the labour market, keeping the health care workers within the sector, and preparing them for meeting local needs

Source of funding:
[3] ROPs (source: ERDF)
[MA: National Development Agency, Directorate General Managing Authority for Regional Operational Programmes]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
IRELAND

GDP of Ireland amounts to €164b. Irish GDP per capita (in PPS) represents 128% of the EU28 average.

Health sector spending amounts to ca. 8.1% of the country’s GDP.

Healthy life expectancy of males / females reaches 78.7 / 83.2 years which represents 103.4% / 101.2% of the EU28 average. *

Programming period 2014-2020

Both Irish regions fall under the category of ‘more developed regions.’

| Scope of investments: | Although no direct allocation to health priorities has been identified, some health-relevant projects could be implemented in the following areas:
  - **E-health**[^1,^2]
    - Investing in broadband infrastructure as an important facilitator of activities important to society
    - Aims to reduce operating costs by allowing more flexible work patterns to be put into effect
  - Improving employability of vulnerable groups[^3]
    - Activities increasing employability of people with health problems, e.g. disabled people
    - Work with young people to address issues such as drug and alcohol abuse, or emotional and mental health |

IRELAND

Programming period 2007-2013

The two Irish regions fell under various objectives of Cohesion Policy. Southern and Eastern region falls under the ‘competitiveness and employment objective.’ Border, Midland and Western region falls under the ‘phasing-in policy.’

OP scheme: 1 / 1 national OP* 0 / 2 regional OPs*

Role of MoH in SF implementation: The Health Department had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**: € 0

Scope of investments: Although there was no allocation to health projects identified or planned (health sector priorities in Ireland were funded from national resources), some projects with health-relevance were implemented in the following area(s):

Promotion and prevention[1]
- Occupational health and safety training

Source of funding: [1] Operational Programme Human Capital Investment (source: ESF)
[MA: Department of Enterprise, Trade and Employment]

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.
ITALY

GDP of Italy amounts to €156.7 billion. Italian GDP per capita (in PPS) represents 100% of the EU28 average.

Health sector spending amounts to ca. 9.2% of the country’s GDP.

Healthy life expectancy of males / females reaches 79.8 / 84.8 years which represents 104.9% / 103.2% of the EU28 average.*

Programming period 2014-2020

Almost all of the Italian regions fall under the category of ‘more developed regions.’ Abruzzo, Molise and Sardegna are ‘transition regions.’ Puglia, Campania, Basilicata, Calabria and Sicilia are ‘less developed regions.’

Role of MoH in ESIF implementation:

The Ministry of Health is to be a beneficiary of ESIF co-financing.

Financial allocations which include health:

<table>

Total: €664,911,778

Scope of investments:

- Social Inclusion
  - Strengthening community-based care, incl. active policy measures focusing on social and health services
  - Infrastructure interventions regarding housing and health and social support measures for homeless people in the path toward autonomy (focus on marginalized communities including the Roma minority)

- Improving employability of vulnerable groups
  - Activities increasing employability of people with health issues, e.g. mental or other health problems
  - Activities increasing employability of youth (focus on disabled or disadvantaged youth), including internships and support of development of skills and gaining experience (also in areas such as human services, and social and health services)

- Quality management
  - Interventions of innovation in the management of health services that provide support to the development of functional skills to the implementation of innovation processes ("Patto per la salute")
  - Training, standard setting and experimental implementation of organizational models for planning and organization of government innovation, including implementing best practices
  - Measures for development and strengthening of cooperation in inter-institutional network and involvement of stakeholders, with particular reference to, e.g. services for the protection of health

- Types of investments under regional operational programmes
  - ICT applications strengthening (eHealth)
  - Access to sustainable and high quality services
  - Active and healthy ageing

- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Italy, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

Programming period 2007-2013

Almost all of the Italian regions fell under the 'competitiveness and employment objective.' Sardegna was a 'phasing-in region.' Basilicata was a 'phasing-out region.' Campania, Puglia, Calabria and Sicilia were 'convergence regions.'

OP scheme: 3 / 10 national OP
n/a / 42 ROPs*

Role of MoH in SF implementation:
In Italy, the Ministry of Health was a beneficiary of projects implemented under the National Operational Programme Governance and Technical Assistance 2007-2013 for the Convergence Objective.

Financial allocation which include health**:
€222 129 708

Scope of investments:
- Health infrastructure
  - Investment in social and health services, including strengthening technological innovation
  - Strengthening infrastructure networks and improving accessibility to social and health services

- Access to health services
  - Increasing care services to individuals and families
  - Reinforcing innovative urban networks, disseminating high-quality services, and improving the well-being of the local population

- Health promotion and prevention
  - Prevention and environmental protection, which is fundamentally important for guaranteeing hygiene and public health
  - Preventing health risks and overcoming the shortcomings in health infrastructures

- Education and training
  - Training strategies and high-level training, including training in the field of research and technological innovation
  - Cycles of training seminars aimed at health personnel, training activities for professionals in the social / health fields, training initiatives to support and consolidate the skills of professionals in the social / health fields
  - Taking advantage of university institutions in the relevant region and centres of excellence for research and innovation

- Strengthening of public health capacities
  - Project aimed at support of programming and governance competencies of the Convergence Objective of Regional Governments

Source of funding:
[1] ROPs (source: ERDF, ESF) [MA: various institutions]
[2] Security Operational Programme (source: ERDF) [MA: Ministry of Interior, Director of the Coordination and Planning of Police Forces]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
LATVIA

GDP of Latvia amounts to €22.1b. Latvian GDP per capita (in PPS) represents 64% of the EU28 average.

Health sector spending amounts to ca. 6% of the country's GDP.

Healthy life expectancy of males / females reaches 68.9 / 78.9 years which represents 90.5% / 96% of the EU28 average.*

Programming period 2014-2020

Latvia as a whole country represents one single region which falls under the category of 'less developed regions.'

OP scheme:

1 / 1 multi-fund national OPs**

0 / 0 regional OPs**

(country level = NUTS 2 level)

Role of MoH in ESIF implementation:

The Latvian Ministry of Health is to act as an Intermediate Body for implementation of health priorities under the Operational Programme Growth and Employment.

Financial allocations which include health:

</tbody>
</table>

Scope of investments:

E-health[1]

- Common e-health portal, e-booking visits referral, electronic health records, e-prescriptions and integration platform solutions, as well as industry statistics and data analysis information system

Improving access to primary health care[1]

- Development of planning, including access to health services and infrastructures, patient flow planning, health promotion planning, health care level selection criteria and guidelines for clinical health care
- In-house training program development and implementation, including the development of specific skills related to the knowledge and skills needed for the implementation of the four priority systems, including medical treatment and medical aid to persons for social work specialists

Health promotion and prevention[1]

- Health promotion and disease prevention measures (cardiovascular, oncology, perinatal and neonatal period care and mental health)

Improving employability of vulnerable groups[1]

- Activities aimed at improving employability of people with health issues, e.g. disabled people

Community-based care[3]

- Development of a deinstitutionalization plan
- Informational and educational activities
- VSAC (State Social Care Centres of Latvia) client preparation for the transition to living in the community, community-based service establishment and its provision
- Focusing on children and young people, potential guardians, adoptive parents, foster families, adults with mental disabilities receiving services in long-term social care institutions, as well as persons who can potentially become VSAC clients

Active and healthy ageing[3]

- Ability, skills and health assessment of older employees
- Establishment of a pilot-system supporting employees with identified health problems that limiting their work, programs include necessary rehabilitation, etc.

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

---

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Latvia, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

LATVIA

Programming period 2007-2013

Latvia as a whole country formed a sole region which fell under the ‘convergence objective.’

OP scheme: 2 / 3 national OPs * 0 / 0 regional OPs *

Role of MoH in SF implementation: In the 2007-2013 programming period, the Ministry of Health acted as an Intermediate Body and was also a beneficiary from existing operational programmes.

Financial allocation which include health **:

\[ \text{€247 272 580} \]

Scope of investments:

- **E-health**\(^1\)
  - Providing the necessary ICT infrastructure and Internet access to public administration bodies
  - Development of e-services

- **Health infrastructure**\(^2\)
  - Improvement of the infrastructure of providers of the ambulatory health care services
    - Ensuring and developing ambulatory health care services, including primary health care providers network

- **Access to health care and improved health services**\(^2\)
  - Improvement of the emergency medical assistance services available, in order to provide quick and effective medical assistance in pre-hospital care
  - Optimisation of the network of providers of hospital health care services
  - Improvement and concentration of medical equipment required for the treatment of patients

- **Health research**\(^2\)
  - Performing studies and surveys analysing relationship between health status at work, health status of inhabitants in working age, health services and the employment situation
  - Analysis of the present situation in order to forecast situation in the next years and to elaborate new guidelines and programmes for improving the health of workers

- **Education and training of medical staff**\(^2\)
  - Enhancing qualification and skills and inclusion in labour market, to obtain quality health care services, diagnostic of illness, medical rehabilitation, preventive actions, sector administration of full value, and to promote cooperation between health care institutions and employers

Source of funding:

[1] OP Infrastructure and services (ERDF)
[MA: Ministry of Finance of the Republic of Latvia]

Scope of investments:
- **E-health**¹
  - Expansion of the electronic health system and electronic health services
- **Transition to community-based services**¹
  - Development of infrastructure of transitional services and non-institutional social services
  - Development of non-institutional service centres (e.g. psycho-social assistance institutions for people addicted to psychoactive substances, victims of human trafficking and violence, day centres for people with disabilities, except for mental disabilities)
  - Modernisation and development of infrastructure of social care homes for the elderly in the community
  - Integration of public health-care services with personal health care and social services
- **Reduction of health inequalities**¹
  - Enhancing accessibility and quality of health services for population of target groups and target territories with a view to strengthening the prevention and management of risk factors of the main chronic diseases
  - Attracting required health professionals to health care institutions in regions with the largest disparities
- **Health prevention and promotion**¹
  - Development of infrastructure for the prevention and early diagnostics of diseases associated with ageing, renovation of infrastructure for the development of geriatric services, medical rehabilitation, and more effective and faster health recovery
  - Improving health literacy and forming healthy lifestyle skills for the identified target groups
- **Improving employability of vulnerable groups**¹
  - Activities increasing employability of people with health issues, e.g. disabled people

LITHUANIA

Programming period 2007-2013

Lithuania as a whole represented one region, which fell under the ‘convergence objective.’

OP scheme: 3 / 4 national OPs ⁄ 0 / 0 regional OPs*  
(country level = NUTS 2 level)

Role of MoH in SF implementation: In the 2007-2013 programming period, the Ministry of Health acted as an Intermediate Body for Operational Programme for Promotion of Cohesion for 2007-2013.

Financial allocation which include health**: €240 086 875

Scope of investments:

Health infrastructure modernization[1]
- Modernisation of the infrastructure of health care services and improvement of the quality and access of services (preventive medicine, diagnostics, and modern treatment)
- Reorganisation of about 40 district hospitals in accordance to modern requirements
- Introduction of modern medicine technologies in health care establishments where medical specialists of the highest qualification are employed
- Investments improving infrastructure of radiation therapy with special attention given to renewal of infrastructure of hospitals where radiation therapy methods are applied and investments in modernization of other treatment methods – surgical treatment, chemotherapy
- Investments in development of emergency medical services and development of personal health care institutions functioning as a trauma centres
- Development of infrastructure of flexible mental health care services by establishing day-centres of mental health care in addition to already created infrastructure of mental health centres on municipal level

E-health[2]
- Development and implementation of e-health services (electronic medical files, patient health monitoring systems, medical research e-centres)

Health prevention and promotion[1]
- Strengthening of health monitoring and education and society’s health care in communities by establishing institutions providing health care services

Medical staff training[1,3]
- Training of medical staff related to use of new technologies (e-solutions, most advanced diagnostic equipment, etc.)

Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
LUXEMBOURG

GDP of Luxembourg amounts to €42.9b. Luxembourger GDP per capita (in PPS) represents 263% of the EU28 average. Health sector spending amounts to ca. 6.8% of the country’s GDP.

Healthy life expectancy of males / females reaches 79.1 / 83.8 years which represents 103.9% / 1019% of the EU28 average.*

Programming period 2014-2020

Luxembourg represents one region which falls under the category of ‘more developed regions.’

OP scheme: 2 / 2 national OPs ** 0 / 0 regional OPs (country level = NUTS 2 level)

Role of MoH in ESIF implementation: The Ministry of Health in Luxembourg is not to act as a Managing Authority or as an Intermediate Body for implementation of health priorities under ESIF.

Financial allocations which include health: €0

Scope of investments: Although no direct allocation to health priorities has been identified, some health-relevant projects could be implemented in the following areas:

Medical R&D [1]
- Increasing the number of jobs in the public research and the number of new SMEs involved in R&D, covering health (biotechnology, life sciences), biotechnology, and other areas of social interest

Improving employability of vulnerable groups [2]
- Provision of support to socially or medically challenged (e.g. disabled) people to get back to work

Source of funding:

For more detailed information about the health-relevant OP, please, see the following page.

* Sources of information (respectively): Eurostat Statistics Database; The Economist Data, unless otherwise indicated, refer to the year ending 31 December 2012. Life expectancy by gender at birth reflects the year 2012.

** Number of OPs that include health vs. total number of OPs adopted for 2014-2020 programming period.

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Luxembourg, only indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

LUXEMBOURG

Programming period 2007-2013

Luxembourg represented one region which fell under the ‘competitiveness and employment objective.’

<table>

Role of MoH in SF implementation:
Ministry of Health in Luxembourg had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**:
€0

Scope of investments:
Although there was no allocation to the identified or planned health projects, some projects with health-relevance were implemented in the following area(s):

Healthy workforce[^1]
- Under the priority ‘improving access to sustainable employment,’ maintaining the elderly workforce in the labour market is mentioned, including health and social security aspects
- Projects aiming at elderly employees, health and security at the workplace or employment of handicapped persons were supported

Source of funding:
[1] Operational Programme Luxembourg 2 (source: ESF)
(MA: n/a)

[^1]: Operational Programme Luxembourg 2 (source: ESF)
(MA: n/a)

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
**MALTA**

GDP of Malta amounts to €6.8b. Maltese GDP per capita (in PPS) represents 86% of the EU28 average.

Health sector spending amounts to ca. 9.1% of the country’s GDP.

Healthy life expectancy of males / females reaches 78.6 /83 years which represents 103.3% / 101% of the EU28 average.*

---

**Programming period 2014-2020**

Malta is again one region, but now it falls under the category of ‘transition regions.’

**OP scheme:**
- 2 / 3 national OPs
- 0 / 0 regional OPs

**Role of MoH in ESIF implementation:**
In Malta, the health agenda is in competency of the Ministry for Energy and Health. The Ministry is not to act as a Managing Authority nor as an Intermediate Body for implementation of health priorities under ESIF.

**Financial allocations which include health:**
- Category 053: €19,200,000
- Category 081: €4,299,328
- Category 107: €n/a
- Category 112: €4,000,000
- **Total:** €27,499,328

**Scope of investments:**

- **Medical R&D**
  - Support of indigenous research in the health sector
  - Development of a centre of excellence to promote bio-banking or cell / tissue harvesting and manipulation

- **E-health**
  - Investment in IT platforms and facilities in key sectors for efficient service delivery
  - Facilitation of accessibility of health and clinical data through electronic means

- **Primary care strengthening**
  - Investment in infrastructure for primary health care services
  - Optimisation of capacity in the provision of health services and establishment of a more sustainable primary health care system
  - Development and / or modernisation of primary health care infrastructure, improvement of the regional health facilities in Gozo (aimed at providing services to ageing population)

- **Active and healthy ageing**
  - Support of social, cultural, and recreational facilities providing services aimed at promoting healthy and active lifestyle, particularly amongst children, youths, elderly, and other vulnerable groups
  - Empowerment of individuals to pursue healthy lifestyles and promote their own health

- **Healthy workforce**
  - Promoting awareness of occupational health and safety with aims of fostering employability in particular of older and ageing workers

- **Education and training of medical staff**
  - Providing training and professional development of health and care professionals and workers
  - Expansion of the medical, surgery and health care sciences faculty at the University Campus and in Gozo

- **Improving employability of vulnerable groups**
  - Activities increasing employability of people with health issues, e.g. disabled people

**Source of funding:**

[1] Operational Programme I Fostering a competitive and sustainable economy to meet our challenges (sources: ERDF and CF)
[2] Operational Programme II Investing in human capital to create more opportunities and promote the wellbeing of society (sources: ESF)

MALTA

Programming period 2007-2013

Malta as a whole fell under the ‘convergence objective.’

OP scheme:

2 / 2 national OPs
0 / 0 regional OPs*
(country level = NUTS 2 level)

Role of MoH in SF implementation:

Prior to the establishment of the Ministry for Energy and Health, the health agenda was under the Ministry of Health, the Elderly and Community Care. The Ministry had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**:

€ 28,900,000

Scope of investments:

E-health[1]
• Promotion of e-society
• Improvement of the national health services through a deployed holistic information system and various other initiatives implemented, as part of the national e-health strategy

Health infrastructure[1]
• Relocation of oncology and dermatology departments to other premises offering enhanced facilities to patients

Occupational health[1]
• Investments at the public information level
• Investments at the micro level of enterprises

Social inclusion[1]
• Access to education and training and sustainable employment opportunities for disadvantaged communities and groups at risk of poverty, including persons with mental health difficulties or disabled persons

Source of funding:

[1] OP 1 Investing in competitiveness for a better quality of life (sources: ERDF and CF)
[MA: Ministry for European Affairs and Implementation of the Electoral Manifesto, Planning and Priorities Coordination Division]

[2] OP 2 Empowering people for more jobs and a better quality of life (sources: ESF)
[MA: Office of the Prime Minister, Planning and Priorities Coordination Division]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Santa [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
GDP of the Netherlands amounts to €599b. Dutch GDP per capita (in PPS) represents 127% of the EU28 average.

Health sector spending amounts to ca. 12.4% of the country’s GDP.

Healthy life expectancy of males / females reaches 79.3 / 83 years which represents 104.2% / 101% of the EU28 average.*

Programming period 2014-2020

There is no change in Dutch regions categorization but reflecting the new nomenclature; all of its regions fall under the category of 'more developed regions.'

<table>
<thead>
<tr>
<th>OP scheme:</th>
<th>1 / 1 national OP**</th>
<th>3 / 4 regional OPs**</th>

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents. The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (Including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In the Netherlands, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

### NETHERLANDS

#### Programming period 2007-2013

Dutch regions fell under the 'competitiveness and employment objective.'

<table>
<thead>
<tr>
<th>OP scheme:</th>
<th>0 / 1 national OP*</th>
<th>4 / 4 regional OPs*</th>
</tr>
</thead>
</table>

#### Role of MoH in SF implementation:

The Ministry of Health, Welfare and Sport had no formal role in the implementation of the Structural Funds in 2007-2013.

#### Financial allocation which include health**:

€0

#### Scope of investments:

Although there was no allocation to health projects identified or planned, some projects with health-relevance were implemented in the following area(s):

**Spatial quality of living and working environment**

- Physical investments in the attractiveness and safety of public areas and green areas open to the public
- Environmental measures focusing on improving the air quality in order to contribute to the quality of the living environment

**Innovation and entrepreneurship**

- Opportunities to exchange knowledge and arrive at new innovations especially at the borderline between sectors / fields of technology, for example between nanotechnology and food
- SMEs can be involved through public authorities subcontracting research to them

#### Source of funding:

[1] ROPs North Netherlands, West Netherlands, South Netherlands and East Netherlands (source: ERDF)

[MAs: regional administrations]

---

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.
**POLAND**

GDP of Poland amounts to €381b. Polish GDP per capita (in PPS) represents 67% of the EU28 average.

Health sector spending amounts to ca. 6.7% of the country’s GDP.

Healthy life expectancy of males / females reaches 72.7 / 81.1 years which represents 95.5% / 98.7% of the EU28 average.*

### Programming period 2014-2020

All but one of Polish regions fall under the category of ‘less developed regions.’ Mazowieckie is a ‘more developed region.’

#### Role of MoH in ESIF implementation:

#### Scope of investments:

- **Improving access to primary and emergency health care:**
  - Investments in emergency medical infrastructure and infrastructure of supra-therapeutic entities
  - Support of existing and creation of new hospital emergency departments and trauma centres
  - Medical transport infrastructure development and modernization
  - Support for branches and other organizational units of supra-regional hospitals
  - Support for diagnostic laboratories and other entities involved in the diagnosis

- **Prevention programs for diseases negatively affecting labour force:**
  - Pilot projects in the field of testing and prevention programs, including research, education and encouraging cooperation between highly specialized centres and primary care physicians and general hospitals, in order to counteract the phenomenon of fragmentation of patient care

- **Access to affordable, sustainable and high quality health services:**
  - Deinstitutionalization of care for dependents (incl. the elderly), through development of alternative care
  - Training of the administrative staff and managers of therapeutic entities to improve efficiency of health care, with particular emphasis on the development of analytical capacity and internal audit units
  - Creation of a system for mapping of health needs

- **New solutions in formation and implementation of public policies:**
  - Micro-innovation: to reach out for potential social innovators, and subsequently to support development, testing and dissemination of new ideas
  - Macro-innovation: to provide opportunities to make changes to existing practice by entities with greater potential and projects enabling the development of innovation policy
  - Cooperation, exchange of information and experience, with foreign partners

- **Improving employability of vulnerable groups:**
  - Activities increasing employability of youth and people aged 50+ (focus on the disabled or disadvantaged)
  - E-health
    - Improving effectiveness of public administration by implementing and improving IT solutions
    - Digitisation of entities from the health sector and their resources

- **Types of investments under regional operational programmes:**
  - Investments in health infrastructure
  - ICT applications strengthening (e-health)
  - Active and healthy ageing
  - Access to sustainable and high-quality services

**Note:**

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents. The following categories of interventions were considered as relevant for quantification of country allocation to health:

- [053] Health infrastructure
- [081] ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- [107] Active and healthy ageing
- [112] Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Poland, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

POLAND

Programming period 2007-2013

All Polish regions fell under the ‘convergence objective.’

OP scheme: 2 / 6 national OPs*  
n/a / 16 regional OPs*

Financial allocation which include health**: €947 554 977

Scope of investments: Health infrastructure[1,3]
- Achieving an integrated system of Emergency Medical Services with a common communications network, rescue procedures and medical equipment
- Renovation, modernisation and creation of new of general hospitals as well as specialised inpatient facilities such as diagnostic centres

Healthy working lives[2]
- Development of preventive programmes adapted to the needs of specific groups of employees, in particular oriented at reducing the occurrence of occupational diseases
- Development of programmes oriented at supporting the target groups (employees with diagnosed occupational diseases) to get back to work

Increasing qualifications and skills of medical personnel[3]
- Professional education for nurses and midwives, in particular within bridging studies
- Education within the specialisation process for physicians of deficit specialties, such as: oncology, cardiology, occupational medicine
- Postgraduate education of representatives in other medical professions

Enhancing quality management in health care[3]
- Development of certification and accreditation systems in health care institutions
- Training of managerial staff and public resources administrators in the health sector
- Development of qualification standards for the staff that manages the health care

Source of funding:
[1] Operational Programme Infrastructure and environment [source: ERDF]  
[MA: Department for the Management of the Competitiveness and Innovativeness Programmes, Ministry of Regional Development]

[MA: Department for European Social Fund Management, Ministry of Regional Development]

[3] ROPs [source: ERDF]  
[MA: regional administrations]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.

Note: The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
PORTUGAL

GDP of Portugal amounts to €165b. Portuguese GDP per capita (in PPS) represents 76% of the EU28 average.

Health sector spending amounts to ca. 9.4% of the country's GDP.

Healthy life expectancy of males / females reaches 77.3 / 83.6 years which represents 101.6% / 101.7% of the EU28 average.*

Programming period 2014-2020

There is no change in Portuguese regions categorization but reflecting the new nomenclature; almost all of its regions fall under the category of ‘less developed regions.’ Algarve is a ‘transition region.’ The region of the capital Lisboa is a ‘more developed region.’

Role of MoH in ESIF implementation:
The Ministry of Health in Portugal is not to act as a Managing Authority or as an Intermediate Body for implementation of health priorities under ESIF; however, its subordinate body–Central Administration of the Health System (ACSS)–is to act as an Intermediate Body for Operational Programme Social Inclusion and Employment and in Regional Operational Programme in matters related to health.

Total: € 670 558 559

Scope of investments:

Community-based care\[1\]

- Support of Models of Independent Living (MAVI)
- Strengthening the national helpdesk and support network, particularly with training and support to parents and caregivers, and through self-help groups (face-to-face or electronic platforms)
- Extending the network of rehabilitation therapies for children / young people with disabilities
- Creation of community-based services to support people with disabilities in their daily activities and promote social inclusion
- Integrated intervention model for Double Diagnosis situations (DD)-to suit response to people with intellectual disabilities and mental illness, an increase in the number of responses from caregivers institutions and their qualification
- Support of the patient at home / in the community through the use of technology aimed at people living in isolated places far away from hospitals
- Support of SNIPI, program with mission of early childhood Intervention, set of integrated support measures focused on children and family, including prevention, health and social care, and education

Active and healthy ageing\[2\]

- Diversification program services promoting quality of life, well-being of older people and active and healthy ageing

E-health\[3\]

- Digital assisted care services
- Increased efficiency and rationalization costs relating to technological infrastructure, communication and information systems to support the provision of online public services

Education and training of medical staff\[3\]

- Training and development of professional skills of people working in the health sector (training related to modernization of the health infrastructure, care of those with addictive behaviours or mentally ill)

Types of investments under regional operational programmes\[3\]

- Investments in health infrastructure
- ICT applications strengthening (e-health)
- Access to sustainable and high-quality services

Note: ROPs cover approx. 33% of funding allocated for health investments from ESIF

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:
- [053] Health Infrastructure
- [081] ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- [107] Active and healthy ageing
- [112] Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI: Promoting social inclusion, combating poverty and any discrimination.

In Portugal, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’. For more details about the categories of intervention and their classification, see the Annex to the COMMISSION IMPLEMENTING REGULATION (EU) No 215/2014 of 7 March 2014 available at http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.L_.2014.069.01.0065.01.ENG. For more details about the regional and national operational programmes and their respective programmes’ Managing Authorities see: http://ec.europa.eu/ent/main.jsp?catid=576&langid=en (for ESF) and http://ec.europa.eu/regional_policy/en/atlas/programmes/ (for ERDF).
PORTUGAL

Improving the labour market relevance of education and training systems, facilitating the transition from education to work, and strengthening vocational education and training systems and their quality, including through mechanisms for skills anticipation, adaptation of curricula and the establishment and development of work-based learning systems, including dual learning systems and apprenticeship schemes.

1.10iv.4 Increase school success and reducing dropout rates, improving the quality and efficiency of education system and training and learning conditions at the level of pre-school, primary and secondary education.

Summary information

Total allocation through ROPs | ERDF | ESF | €127 528 642; €8 107 454 | €36 670 000 | €222 306 096 |

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:
The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

» 053 Health infrastructure
» 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
» 107 Active and healthy ageing
» 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Portugal, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

### PORTUGAL

#### Programming period 2007-2013

Almost all of Portuguese regions fell under the ‘convergence objective.’ Algarve is a ‘phasing-out region.’ The region of the capital Lisboa is a ‘competitiveness and employment region.’

<table>

---

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.

** Presented financial figures refer to health infrastructure allocation only.

Note: The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Santa [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
GDP of Romania amounts to €131b. Romanian GDP per capita (in PPS) represents 53% of the EU28 average. Health sector spending amounts to ca. 5.1% of the country’s GDP. Healthy life expectancy of males / females reaches 71 / 78.1 years which represents 93.3% / 95% of the EU28 average.*

Programming period 2014-2020

All but one of Romanian regions fall under the category of ‘less developed regions.’ Bucuresti-Ilfov is a ‘more developed region.’

OP scheme: 4 / 6 national OPs ** 0 / 0 regional OPs **

Role of MoH in ESIF implementation:
The Romanian Ministry of Health is to be a beneficiary of some projects implemented under the Operational Programmes Human Capital, Regional OP – infrastructure, Administrative Capacity, and Competitiveness OP.

Financial allocations which include health:

Scope of investments:

- **Health promotion and prevention**
  - Provision of essential health programs and services with a strong component geared to prevention, early detection (screening), early diagnosis and treatment of socially significant diseases (e.g. heart disease, cancer, diabetes, chronic kidney disease, chronic hepatitis, tuberculosis, and HIV-AIDS), including the training and development of professionals involved in the methodological framework
  - Provision of preventive / early diagnosis for mother and child

- **eHealth**
  - Implementation of ICT solutions (ehealth, telemedicine, exchange of best practices / supply necessary training programs for staff involved in the use of new equipment and technologies)

- **Community-based care**
  - Support for assistance programs provided to young people
  - Development of foster care for children with disabilities
  - Development or modernization of social and community centres
  - Investments in buildings for public use for educational, cultural and recreational activities, in order to create, improve or expand basic public services

- **Education and training of medical staff**
  - Support of increased technical capacity of staff involved in the implementation of priority health programs at national and local level (e.g. physicians, nurses, and other relevant personnel) by providing programs training, participation in exchanges / exchanges of good practices, including transnational cooperation activities

- **Medical R&D**
  - Investment in creating and equipping new laboratories, research centres, or upgrading the existing ones, for both public institutions / universities and research firms
  - Development of specific IT cloud infrastructure common to all public sector organizations
  - Creation of online social platforms and data centres, developing unique web portal with access to all public services on websites of public institutions

* Sources of Information (respectively): Eurostat Statistics Database; The Economist Data, unless otherwise indicated, refer to the year ending 31 December 2012. Life expectancy by gender at birth reflects the year 2012.

** Number of OPs that include health vs. total number of OPs adopted for 2014-2020 programming period.
Improving employability of vulnerable groups

- Activities increasing employability of vulnerable groups (e.g. disabled people, older workers, people with low levels of education, the Roma minority)

Improving access to and quality of health care in regions

- Construction/modernisation/expansion of regional emergency hospitals
- Restoration/modernization/expansion of patient departments, including those arising from the reorganization/rationalization of small regional hospitals
- Restoration/modernization/expansion of ICU infrastructure
- Equipping social infrastructure including community centres

Increasing effectiveness and capacity in public administration

- Reducing administrative burden by simplifying legislation in areas including health (pharmaceutical certification, health inspection) and employment (occupational health and safety)

ROMANIA

Programming period 2007-2013

All Romanian regions fell under the ‘convergence objective.’

<table>
<thead>
<tr>
<th>OP scheme:</th>
<th>4 / 7 national OPs *</th>
<th>0 / 0 regional OPs *</th>
</tr>
</thead>
</table>

Role of MoH in SF implementation:
The Ministry of Health was a beneficiary of projects implemented under the operational programmes identified below.

Financial allocation which include health **:
€ 147,550,460

Scope of investments:

- **Health infrastructure** [1,3]:
  - Rehabilitation and modernisation of infrastructure in education, health care services, social services, and public emergency services with aim to bring them to the European standard
  - National health strategy for infrastructure improvement in hospitals and polyclinics, including buildings and equipment

- **Emergency care** [3]:
  - Investment in the national network for emergency and public safety services

- **eHealth** [2]:
  - Development and effective use of electronic public services

- **Quality management** [4]:
  - Strengthening the institutional management capacity of the central and local administration by implementing a strategic management approach to the allocation of resources and the measurement of performance
  - Strengthening the policy formulation, accountability, organisational effectiveness, and quality and efficiency of service delivery on a decentralised basis

- **Promotion of health and safety work conditions** [1,3]:
  - Campaigns on preventing health risks, such as on the need to undertake regular medical check-ups, the damaging effects of tobacco or alcohol, on the need to preserve a proper work environment, free of risk factors, including stress, noise and pollution
  - Support for cross-sector activities in environmental education, health care, and healthy work environment

Source of funding:

[1] Regional Operational Programme (sources: ERDF)
[MA: Ministry of Regional Development and Public Administration]

[2] Increase of economic competitiveness (sources: ERDF)
[MA: Ministry of Economy, Trade and Business Environment]

[3] Human resources development (sources: ESF)

[MA: Ministry of Administration and Interior]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Santa [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
**SLOVAKIA**

GDP of Slovakia amounts to €71b. Slovak GDP per capita (in PPS) represents 76% of the EU28 average.

Health sector spending amounts to ca. 7.8% of the country’s GDP.

Healthy life expectancy of males / females reaches 72.5 / 79.9 years which represents 95.3% / 97.2% of the EU28 average.*

### Programming period 2014-2020

There is no change in the categorization of Slovak regions but reflecting the new nomenclature. All but one of its regions fall under the category of ‘less developed regions.’ The region of the capital Bratislava is a ‘more developed region.’

**OP scheme:**
- 4 / 7 national OPs*
- 0 / 0 regional OPs*

**Role of MoH in ESIF implementation:**
In 2014-2020, the Ministry of Health of the Slovak Republic is to act as an Intermediate Body for the Integrated Regional Operational Programme. The Ministry of Health of the Slovak Republic is also to be a beneficiary of the national projects financed from the Operational Programme Human Resources and several other operational programmes.

**Financial allocations which include health:**

<table>

</tr>
</tbody>
</table>

**Total:** €490 485 588

**Scope of investments:**

1. **Transition to community-based services**
   - Deinstitutionalization of existing facilities providing social services, alternative and psychiatric care, etc.
   - Development of personnel resources for the management of deinstitutionalisation processes
   - Development of community-based care

2. **Integration of care**
   - Modernisation of health infrastructure to support transition to community-based care
   - Modernization of health infrastructure for the integration of primary health care

3. **Creating standard clinical procedures**
   - Design and introduction of new and innovated standard clinical procedures, with primary focus on most frequent and most serious types of diseases
   - Education of health care professionals to ensure correct application of standardized procedures

4. **Promoting access to health care to marginalized communities**
   - Support of health education programs in the segregated and separated Roma settlements

5. **E-health**
   - Introduction of telemedicine services on a larger scale
   - Support of meeting European standards, interoperability testing, and certification of health care systems

6. **Strengthening of institutional capacities**
   - Optimisation of sector policies and methodologies—e.g. opening the system of integrated health care, functional model of regional management of health care, and public health and other public services
   - Improved strategic and analytical capacities of the Ministry of Health

7. **Planning of human resources in health care**
   - Forecasting and monitoring labour market needs and development and implementation of educational programs to develop competences of adults, as to satisfy the labour market demand

**Source of funding:**

- [1] Operational Programme Human Resources (sources: ERDF, ESF, CF and YEI)
- [3] Integrated Regional Operational Programme (source: ERDF)
- [4] Operational Programme Effective Public Administration (source: ESF)

** Planned allocations are predominantly covering non-health interventions; the planned health allocation could not be assessed.

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.

Note:

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- 053 Health Infrastructure
- 081 ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- 107 Active and healthy ageing
- 112 Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Slovakia, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG SANTE ([http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm](http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm)). Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
SLOVENIA

GDP of Slovenia amounts to €35b. Slovenian GDP per capita (in PPS) represents 84% of the EU28 average. Healthy life expectancy of males / females reaches 77.1 / 83.3 years which represents 101.3% / 1013% of the EU28 average.*

Programming period 2014-2020

Slovenia is newly separated into two NUTS-2 regions. Zahodna Slovenija falls under the category of ‘more developed regions’ and Vzhodna Slovenija is a ‘less developed region.’

OP scheme: 1 / 1 multi-fund national OP ** 0 / 0 regional OPs **
Role of MoH in ESIF implementation: The role of MoH is not available yet.

Financial allocations which include health:

Total: € 59 527 948

Scope of investments:

- Reducing early retirement†
  - Development of analyses, models, information systems to support the active and healthy ageing, and exchange of best practices with other EU Member States
  - Promotion, awareness-raising, motivation, and provision of information to the public, workers, and employers about the importance of active and healthy ageing

- Promotion of programmes designed to ensure health and safety at work†
  - Programmes promoting occupational health and safety
  - Support for the introduction of risk assessment tools in the area of health occupational health and safety
  - Training of employers to use the introduced tools, and promoting a culture of injury / disease prevention

- Improving the quality of community-based services†
  - Development of integrated community-based forms of social and health care services in the area of long-term care
  - Establishment and operation of single entry points; training of professional staff; development of ICT support services and structures
  - Modernisation of the network of nursing homes and mobile units
  - Construction or acquisition of a network of community and individual housing units
  - Establishment of day and intergenerational centres at which integrated social and health care services will be provided

- Increased social inclusion of vulnerable groups†
  - (e.g. persons suffering from alcohol or drug abuse, or from mental health disorders, disabled people, the Roma minority)
  - Upgrade of existing and development and implementation of new programmes of health care centres to make them more responsive to the needs of the target groups, including education and training of the health care providers
  - Upgrade of programmes at health care centres for managing chronic diseases and risk factors, including support for behavioural changes and connections to social services
  - Empower target groups to bring them closer to the labour

For more detailed information about the health-relevant OP, please, see the following page.

SLOVENIA

Programming period 2007-2013

The one Slovenian region fell under the ‘convergence objective.’

OP scheme: 2 / 3 national OPs* 0 / 0 regional OPs* (country level = NUTS 2 level)

Role of MoH in SF implementation: n/a [will be updated]

Financial allocation which include health*: €15 486 000

Scope of investments:

E-health[1]

- Linking of all health care information systems into a single system called eZIS
- Incorporation of a single entry health care information point into the national health system by introducing the concept ZVEM (health care–one-stop-shop) for all target groups and a simultaneous setting-up of a system of authorisation and authentication of the users of digital medical data
- Setting-up and introduction of electronic medical record (EZZ) and training for its effective use

Health infrastructure[2]

- Co-financing of investments into cultural, health, social-protection and other infrastructures of regional importance

Medical staff training[1]

- Development and on-going maintenance of the programmes of professional training in the field of:
  - Quality in health care
  - Health care informatics
  - Special knowledge such as the one in public health, i.e., for responsiveness to health threats and studying of key public health problems including safety and health at work
  - Management and governance

Quality management[2]

- Enforcing the use of modern managerial techniques for managing changes and achieving business excellence in the public sector
- Development of human resources and knowledge management
- Development of a system for strategic planning and for monitoring the achievement of the set objectives and results

Source of funding:

[MA: Ministry of Economic Development and Technology]

[MA: Government Office for Local Self-Government and Regional Policy]

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Sante [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
Note: The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- **053** Health Infrastructure
- **081** ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- **107** Active and healthy ageing

**Scope of investments:**

- **Medical R&D**
  - Support of R&D and singular performances linked to medical challenges, including promotion of translational research and structures cooperative research
  - Research projects and innovation in health of proven quality, aimed at the transfer and application of scientific and technical knowledge to improve the prevention, diagnosis and treatment of diseases
  - Designing research and non-commercial clinical innovation aimed at development of pharmaceutical drugs
  - Integrated excellence in Biomedical Research Consortia Network (CIBER) and the Health Research Institutes (IIS)

- **E-health**
  - ICT promotion in the management of chronic diseases as well as telemedicine and telecare projects
  - Encouraging innovation in ICT application for the prevention of chronic conditions and dependency
  - Integration of health and social information systems, to provide different services and tools for health care and social services

- **Support for SMEs in health sector**
  - Creation of 12 centres each specialized in different areas, including biotechnology, food industry, and health sciences

- **Improving employability of vulnerable groups**
  - Activities increasing employability of people with health issues, e.g. disabled people (focus on young people)

**Types of investments under regional operational programmes**

- Investments in health infrastructure
- ICT applications strengthening (e-health)

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents. The following categories of interventions were considered as relevant for quantification of country allocation to health:

- **053** Health Infrastructure
- **081** ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- **107** Active and healthy ageing
- **112** Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Spain, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

### Summary information

| Total allocation through ROPs | ERDF; ESF | 053, 081; 112 | £176 589 366; £257 058 622; £67 011 854 | £500 659 842 |

Note:

- The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.
- The following categories of interventions were considered as relevant for quantification of country allocation to health:
  - **053** Health Infrastructure
  - **081** ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
  - **107** Active and healthy ageing
  - **112** Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In Spain, also possible indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as ‘n/a’.

Programming period 2007-2013

Spanish regions fell under various objectives of Cohesion Policy. Illes Balears, Cataluña, Aragón, Comunidad de Madrid, Comunidad Foral de Navarra, La Rioja, País Vasco and Cantabria were regions under the ‘competitiveness and employment objective.’ Comunidad Valenciana, Castilla y León and Canarias were ‘phasing-in regions.’ Región de Murcia, Principado de Asturias, Ciudad Autónoma de Ceuta and Ciudad Autónoma de Melilla were ‘phasing-out regions.’ Galicia, Castilla-La Mancha, Extremadura and Andalucía were regions under the ‘convergence objective.’

Role of MoH in SF implementation:
Prior to the establishment of the Ministry of Health, Social Services and Equality, the health agenda was under the Ministry of Health and Consumers. The Ministry had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health:
€310 681 155

Scope of investments:

**E-health**
- Towards information society through e-business, e-administration, e-health, e-learning

**Health infrastructure**
- Access to education and health systems and extension of the welfare infrastructure and services to all members of society
- Improvement of health facilities and equipment
- Support to children who are less than three years of age

**Health promotion**
- Increased investments in health promotion in the work environment
- Promotion occupational health and safety through programmes, education, incentives for the implementation of work risks prevention, and health improvement plans
- Implementation of technical aid as a complement for innovation applied to social integrity, autonomy, health, and quality of life

Source of funding:

[3] ROPs (sources: ERDF, ESF)
[MA: Ministry of Finance]

Note:
The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Santa [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.
GDP of Sweden amounts to €408b. Swedish GDP per capita (in PPS) represents 126% of the EU28 average.

Health sector spending amounts to ca. 9.6% of the country’s GDP.

Healthy life expectancy of males / females reaches 79.9 / 83.6 years which represents 105% / 101.7% of the EU28 average.*1

Programming period 2014-2020

There is no change in Swedish regions categorization; all its regions fall under the category of ‘more developed regions.’

OP scheme: 1 / 3 national OPs ** 3 / 8 ROPs **

Role of MoH in ESIF implementation: In Sweden, the health agenda is in competency of the Ministry of Health and Social Affairs. The Ministry is not to act as a Managing Authority or as an Intermediate Body for implementation of health priorities under ESIF.

Financial allocations which include health:

Scope of investments: Improving employability of vulnerable groups[1]

- Efforts directed at women and men who are unemployed or detached from the labour market, programmes are focused at people with disability that reduces work capacity, or those who have been sick and are in need of support in order to get back to work

Types of investments under regional operational programmes[2]

- ICT applications strengthening (e-health)

Note: ROPs cover approx. 100% of funding allocated for direct health investments from ESIF in Sweden.

**Summary Information**

| Total allocation through ROPs | ERDF | 081 | €6 847 340 | €6 847 340 |

*** Although the priority axis of respected OP refers to some health related investments, financial allocation for health related investments could not have been unambiguously assessed.
Programming period 2007-2013

Swedish regions fell under the 'competitiveness and employment objective.'

OP scheme: 1 / 1 national OP*  
n/a / 8 regional OPs*

Role of MoH in SF implementation: The Ministry of Health and Social Affairs had no formal role in the implementation of the Structural Funds in 2007-2013.

Financial allocation which include health**: € 0

Scope of investments: Although there was no allocation to the identified or planned health projects, some projects with health-relevance were implemented in the following area(s):

Medical R&D[2]
- Enhancing successful interaction between research, business, public sector, and political institutions
- Focus on sustaining and developing Sweden’s competitiveness; areas of the focus are IT, pharmaceuticals, biotechnology, and medical technology

Healthy workforce[1,2]
- Projects aimed at preventing long-term sick leave

Source of funding:
[1] National Social Fund Operational Programme (sources: ESF)  
(MA: Swedish ESF Council)

[2] ROPs (sources: ERDF)  
(MA: Swedish Agency for Economic and Regional Growth)

* Number of OPs that include health vs. total number of OPs adopted for 2007-2013 programming period.
** Presented financial figures refer to health infrastructure allocation only.

Note: The information related to the 2007-2013 health allocation and scope of health investments builds on information presented on the web by DG Santa [http://ec.europa.eu/health/health_structural_funds/used_for_health/info_sheets/index_en.htm]. Any further country-specific information was mainly collected through interviews conducted with relevant contacts at the Ministry of Health or other institutions involved in the implementation of the EU Structural Funds at a national level and from open public sources.
UNITED KINGDOM

GDP of United Kingdom amounts to €1926b. British GDP per capita (in PPS) represents 104% of the EU28 average.

Health sector spending amounts to ca. 9.4% of the country’s GDP.

Healthy life expectancy of males / females reaches 79.1 / 82.8 years which represents 103.9% / 100.7% of the EU28 average.*

Programming period 2014-2020

Almost all of the British regions fall under the category of ‘more developed regions.’ Highlands and Islands, Northern Ireland, Cumbria, Tees Valley and Durham, Lancashire, South Yorkshire, East Yorkshire and Northern Lincolnshire, Lincolnshire, Shropshire and Staffordshire and Devon are ‘transition regions.’ West Wales and the Valleys and Cornwall are ‘less developed regions.’

OP scheme: 0 / 0 national OPs** 10 / 12 regional OPs**

Role of MoH in ESIF implementation:
The governmental body responsible for health issues is the Department of Health. The Department of Health is not to act as a Managing Authority or as an Intermediate Body for implementation of health priorities under ESIF and is not to be a beneficiary.

Financial allocations which include health: €0

Scope of investments:
Although no direct allocation to health priorities has been identified, some health-relevant projects could be implemented in the following areas:

Medical R&D[2,4,6,8]
- Strengthening the specialised research infrastructure, in East and West Wales, with the intent of increasing the capacity and capability to undertake world class research, including nano-health research
- Support, through grants, of stratified medicine and connected health
- Support of SMEs business aimed at medical devices and digital health care

Healthy workforce[3]
- Activities with employers to address health related issues within the workforce and to develop or improve appropriate occupational health and safety programmes, adopting collaborative approaches in the delivery of occupational health services

Improving employability of vulnerable groups[1,3,7,8,10]
- Activities increasing employability of people with health issues, e.g. disabled people

Source of funding:

**Note:**

The information about the planned health allocation and scope of health investments presented on the previous sheets was identified based on analysis of the final versions of the 2014-2020 programming documents.

The following categories of interventions were considered as relevant for quantification of country allocation to health:

- [053](#) Health Infrastructure
- [081](#) ICT solutions addressing the healthy active ageing challenge and e-Health services and applications (including e-Care and ambient assisted living)
- [107](#) Active and healthy ageing
- [112](#) Enhancing access to affordable, sustainable and high-quality services, including health care and social services of general interest

Categories 107 and 112 might in some cases also include non-health related interventions. However, for the purposes of this mapping, these categories are involved in calculations of the planned health allocations of the Member States as categories with the closest link to health, when compared to other categories under intervention field VI. Promoting social inclusion, combating poverty and any discrimination.

In the UK, only indirect health investments were identified. In case of indirect health investments covering predominantly non-health interventions, the planned health allocation could not be unambiguously assessed and were marked as "n/a".
